Micromax to begin assembling devices in India

India's leading domestic smartphone maker, Micromax, plans to begin assembling its devices locally. According to reports, the smartphone maker will be assembling phones at its facility located in Rudrapur, Uttarakhand, for which trials have already started. However, these phones will be commercially launched by the first quarter of the next year.

Aakash 4 may be manufactured in India

Aakash tablet PC was surely assembled in India, but we wonder if we can really call it 'Made in India.' Addressing this concern, the government of India is now reportedly planning to make manufacturing of the device mandatory in India. According to a government source familiar with the matter, the latest tender inviting bids for Aakash 4 devices will carry the clause that the device should be manufactured in India.

Google Chromecast now supports 10 more apps

The Google Chromecast section on the Play Store now has 10 new additions. According to reports, the search giant has announced adding 10 more applications that will now support Chromecast. This would give customers and users more options to stream content using the Chromecast dongle. Do it on a high-definition television for best results.

ZTE to launch its smartwatch

ZTE will reportedly be releasing a smartwatch in 2014. According to a report by the Wall Street Journal, the smartwatch will be announced in the first quarter of 2014. The device though will be available for sales in the second quarter of the next year. ZTE is planning to target mainstream users by keeping the device's price on the lower side.

LG Announces G Flex Smartphone with a Curved Screen

The LG G Flex is the world's first truly flexible smartphone

LG, the South Korean electronics giant, launched its 139.7cm (55-inch) curved OLED television and the much-awaited LG G Flex smartphone in the country recently.

The LG G Flex smartphone, which is the world's first truly flexible smartphone, is curved at a radius of 700mm. The device has a 15.2cm (6-inch) curved plastic OLED screen. On the specifications front, it has the same specs as LG G2 smartphone.

LG says that the curve brings a lot of additions to the phone. The

Price: ₹ 65,000 (approx.)

device can sustain up to 40kg of weight on it and still retain its shape. The company has developed a curved battery in order to accommodate the durability. In addition, the device has LG's much touted self-healing back cover and also enhances the device's audio quality by 3dB. There are also other features like the swing lockscreen, dual window and camera timer. LG has also developed the QuickWindow case for the G Flex.

Karbons Launches Titanium X with Full HD Screen

The device is powered by a Full HD display combined with IPS screen and packs a 1.5GHz Quad-Core processor and 1GB RAM

It is time for Full HD screen smartphones to galore in the Indian market. After announcing Titanium S6, Karbons has launched Titanium X smartphone in India. The company touts that the Titanium X is 'designed to redefine the smartphone usage experience of the youth—the Generation X'.

The Karbons Titanium X is powered by a Full HD display combined with IPS screen. It packs a 1.5GHz quad-core processor and 1GB RAM. The smartphone runs on 4.2 Jelly Bean OS and the company has also promised an OTA update for the newer versions of Android. The smartphone

Price: ₹ 18,490

is a single-SIM device with support for a micro-SIM.

On the memory front, it packs a 16GB internal memory. The company has possibly missed out on battery issues that were faced by its predecessors and has added just 2300mAh battery. The latest Android smartphone features a 13MP rear camera with a dual flash along with a 5MP front camera with flash.

The Karbons Titanium X features One Glass Screen (OGS) enabled with IPS display for wide viewing angles, NFC, OTG support up to 32GB, sleek unibody design amongst other features.
