

TABLE I
Sensors and their Technology for Specific-use Cases

Sensors	Technology	Usage	Product
Highly sensitive six-axis sensor	Augmented Reality technology and Remote Play technology	Provides completely new ways to play and interact with games	PS4
Proximity sensor	Capacitive Multipoint-Touch technology	Orientation, capacitive touch	Lumia 2520
Sudden motion sensor	Sudden Motion Sensor technology	To help protect the hard disk from damage against sudden vibration or accelerated movement	MAC Book Pro
Motion sensor (gyroscopes, accelerometers and magnetic sensors)	9-Axis Sensor Fusion technology	Less power consumption, increase in battery life, fusion of motion sensor by any manufacturer without any restriction	AnyMobile device
Motion sensor	DSP technology	Remote playback control	Solemate Mini Blue-tooth Speaker
Accelerometer, IR sensor	Motion Sensing technology, RF technology	For private listening with built-in headphone jack and compatibility of the device with a remote from any manufacturer	Roku 3
Colour sensor	Triluminos Display technology	For auto colour calibration	VPL-VW500ES 4K-Camera
Capacity sensor	Capacitive Input technology	Easy one-touch scrolling and quick system control through a customisable gadget bar	EdgeTouch LCD Sensor
Eco sensor	Motion Sensing technology, Smart Control and Smart Recognition	Allows easy and smooth working of the set-top box and the remote control with the following smart interactions: face recognition, hand gesture recognition and voice recognition	F9000 (4K TV)
Exmor R CMOS sensor		For image processing	Cybershot DSC-QX10 and DSC-QX100 lens cameras
Fingerprint sensor	Fingerprint technology	To unlock the phone and use iTunes	iPhone 5C, 5S
Motion sensor	Motion Sensor technology	To save power when the phone is not being carried around by checking for updates less often (motion sensor)	iPhone 5S
Gyroscope, accelerometer, light sensor, magnetometer, hall sensor, proximity sensor (with cellular model)	TruVivid technology	Fuses sensor glass with the sensor attached as a film	Nexus 7
Ambient light sensor, gyroscope, magnetometer, proximity sensor, tilt sensor	In-cell touch technology	No discrete touch panel, technology is integrated in the display	Huawei Ascend P6
Kinect sensor	Kinect Real Motion, Voice, Vision technology	Track up to six skeletons at once, perform heart rate tracking, track gestures performed with an Xbox One controller, and scan QR codes to redeem Xbox Live gift cards	Xbox one

important as a physical sensor.

New sensors that design houses are looking forward to

Several sensors have emerged in the Indian market since last one year for different applications. The most awaited in power electronics and industrial applications, according to Reddy, is Allegro's ACS712—a linear current sensor in a SOIC 8-pin package. He explains that it brings in economical and precise solutions for AC or DC current sensing for applications including motor control, load detection and management, switched-mode power supplies

and overcurrent fault protection. "The device consists of a precise linear Hall sensor with a copper conduction path located close to each other. Applied current flowing through this copper conduction path generates a magnetic field, which is sensed by the integrated Hall IC to develop a linear potential at its output. Device accuracy depends on close proximity of the magnetic signal to the Hall transducer," he adds.

Interesting developments. The year 2013 saw many brands enter the field of sensors along with the older brands that brought some amazing innovations in this field.

1. ARM has come up with 'Sensor

Bubble' that is supposed to surround car drivers in order to keep them safe whilst driving. It allows the driver to slow down safely in case of a tire burst (for example) and would send an RFID signal to the traffic following to alert the other drivers to slow down too; the signal would also go into the drivers' GPS to suggest them an alternate route.

2. Open Geospatial Consortium (OGC) came up with 'The Sensor Web Enablement Initiative.' As per this initiative, the web service is interfaced with data coding in order to create building blocks for a worldwide sensor web that would create a framework of open standards and allow diverse
