

TABLE I
ESD Components from Different Vendors

	Electronic Control Components and Devices		Static Systems Pvt Ltd		Sumitron Exports Pvt Ltd		Blue Sky System	
	Make/Model	Specifications	Make/Model	Specifications	Make/Model	Specifications	Make/Model	Specifications
Wrist straps	Imported	• Adjustable elastic fabric/ or metallic bands with coiled cords	SELEN/WS101	ANSI ESD conforming to ANSI/ESD S-1.1	3M/Product #2204	1/8 in. (4mm) snap, silver plated, monofilament elastic band, 1 megohm resistor built into ground cord	Blue Sky System (Model BS-GA-601, 602,603,604)	
Anti-static table mats	Imported	• Three-layer, ESD PVC mats, SR: 10^8 - 10^{10} ohms • Two-layer, ESD rubber mats, SR: 10^8 - 10^{10} ohms	SIU/R11	ANSI ESD conforming to ANSI/ESD S-7.1	3M/8200 Series	Dissipative vinyl three-layer mats and rolls, top and bottom layers-Vinyl	Blue Sky System (BS-Vinyl Mat 001)	Less than 10^9 ohms/sq
Table	Imported	• Anti-static, ESD safe, various sizes and various accessories • SR: 10^8 - 10^{10} ohms/sq.	SS/ASB	ANSI ESD conforming to ANSI/ESD S-4.1	TRESTON/WB 815 ESD	Allen - key adjustable work bench	Blue Sky System (BS-WS-101AL, BS-WS-104 MS)	
Chairs	Imported	• Anti-static, available in various sizes and ESD materials, with or without armrests • With ESD castors and conductive grounding chain, height adjustable, ESD safe • SR: 10^8 - 10^{10} ohms/sq.	SELEN YZ 101	ANSI ESD conforming to ANSI/ESD STM-12.2	TRESTON/X 25 PU ESD	Height adjustment controlled through gas lift	Blue Sky System (BS-CH-201)	SR of leatherite upholstery less than 10^{10} ohms/sq Seat-to-ground resistance less than 10^9 ohms/sq
Cabinets	Imported	• Anti-static, ESD safe, available in various sizes • SR: 10^8 - 10^{10} ohms/sq.	Dr.STORAGE/6251	ANSI ESD conforming to ANSI/ESD STM-12.2	TRESTON/LMC 01 ESD	Drawers mounted on telescopic ball race slides. The cabinet frames are semi-conductive epoxy power-coated steel	Blue Sky System (BS-CA-101)	
Brush	Imported	• Black, conductive, ESD safe, available in various types • SR: 10^8 ohms/sq.	SELEN/1859	ANSI ESD conforming to ANSI/ESD S-11.11	CT Tools, ESD brushes of various sizes		Blue Sky System (BS-2053)	
Ionisers	Imported	• As per international standards	HORB/2854	ANSI ESD conforming to ANSI/ESD	SIMCO - ION - Aerostat XC	Extended coverage bench-top ionising blower	Blue Sky System (BS-SNP-2001)	

The defined guidelines for work surface in the document are mentioned below:

1. Resistance-to-groundable point 1×10^6 to 1×10^9 ohms

2. Resistance from point to point ≥ 1 mega-ohm

These guidelines represent a range of resistances that have been proven to provide protection in the manufacturing environment. If the mat's resistance is too low, static transfers to the mat

will be so fast that a spark is created. This spark is an ESD and will damage electronic devices. If the mat's resistance is too high, static transfers to the mat will be so slow that the items placed on the mat will not lose their charge. When the item is removed from the mat, it will still have a static charge and be capable of discharging to other items. Vinyl and rubber are the materials that are widely used in making these types of mats. Vinyl is used in most cases. Rubber is used

in situations where required resistance to heat and chemicals is high.

When you are working with sensitive electronic components, you should consider buying all the equipment for your workstation that is tagged as anti-static or ESD-safe. The materials mentioned below are optional but can be used for better electrostatic protected area (EPA):

1. ESD tables, chairs and stools
2. ESD-safe toolkit (cutter, plier, desoldering pump, etc)
