

liquid crystal display (LCD) monitors, digital still cameras, portable navigation devices, portable media players, portable game devices, automobiles, ebook readers, camcorders, digital photo frames, and portable DVD players. While the size of these markets varies widely and some are quite small, their aggregate growth will propel the rapid expansion and massive volumes of the touchscreen market in the coming years.

Vellore to get a brownfield electronics cluster

Soon Vellore will become the first district to have Electronics Manufacturing Cluster in Tamil Nadu. Over 40 entrepreneurs have grouped together to apply to the Department of Electronics and Information Technology (DeitY), in order to get the Vellore district identified as a 'brownfield' EMC. This initiative has been taken in the leadership of Kramski Stamping and Molding India.

The meeting was organised in collaboration with VIT university Technology Business Incubator (VITB) and Delhi-based ELCINA Electronic Industries Association of India. The government of India is already supporting a number of clusters based on automotive, footwear, coir, embroidery etc in the district but the EMC will be the first amongst the electronics to get the government's support.

The general manager of operations at Kramski, S. Nagarajan, said that Vellore had the perfect climatic conditions and geographical location which consists of extreme heat with low humidity conditions to be called as an ideal location for electronics cluster. And the area also has a number of tiny, small and medium enterprises which are already involved in manufacturing value added components to support electronic industries.

Indian solar bids are cheaper and cost effective: Solar Direct

Solar Direct, the French firm, says that the Indian government offers great cost saving options to investors in renewable energy projects than anywhere else. The firm had recently won a bid in an Indian project and is already done with its 5 MW plant this February. Gaurav
