SOLAR MPPT CHARGERS

MPPT Technology battery charger with temperature compensation :

Maximum Current Constant Voltage (MCCV) battery charging method. When the battery is discharged or not fully charged, the MPPT action will track the panel impedance and give the maximum current to charge the battery. When the battery voltage is close to full charge voltage, it will reduce the current to keep the battery voltage constant. The current will become zero when the battery voltage is equal or more than the full charge voltage.

12 V - upto 60 amps
24 V - upto 80 amps
48 V - upto 100 amps
96 V - upto 100 amps
