4096** **High Definition
Oscilloscopes**

HD4096 high definition technology consists of high sample rate 12-bit ADCs, high signal-to-noise ratio amplifiers and low-noise system architecture. This technology enables high definition oscilloscopes to capture and display signals of up to 1 GHz with high sample rate and 16 times more resolution than other oscilloscopes. This revolutionary hardware architecture combined with Teledyne LeCroy's powerful and intuitive Analysis and Debug tools like WaveScan Search and Find, LabNotebook Report Generator, Spectrum and Power analysis help you debug your designs faster!
