

Spot an Error

And WIN Award!

You can win one thousand rupees plus a certificate from the editor of Electronics For You magazine if you spot and report any factual error in the latest issue of the magazine. Your report will be published in a coming issue of the magazine, giving credit to you.

Though every care is taken in preparation of the content for the magazine, an error can slip in at times. So we invite our learned readers to point out any error that they spot, for the benefit of the other readers.

Rules:

- The error has to be reported before end of the month that is mentioned on cover of the magazine
- The report has to be sent in writing or by email addressed to the Editor, EFM Magazine (editsec@efyindia.com)
- The error should be of factual nature, in the information published in the magazine, and not a grammatical or syntax error
- The correct information should also be provided along with the error spotted by you
- In case more than one person reports the same error, the one whose report reaches us the earliest will get the award money
- In case two or more persons jointly report an error, the award money will be divided amongst them
- EFY employees, their family members and friends, and EFY associates and their family members and friends are not eligible
- Decision of the editor will be final in this matter

electronics
FOR YOU

Augmented reality technology in use in a smartphone

provided on the top to take photo snaps instantly. Google Glass users will be able to take hands-free pictures by using voice-activated commands.

Photo sharing. Just like with Google smartphones, photo sharing is an integral feature of the Google Glass device.

Voice recognition. Google Glass is equipped with Google's state-of-the-art voice recognition feature. In addition, it provides information about the locations and places of interest. On top of this, you can store reminders and create notes using voice command.

Calendar/appointments. Calendar and appointments function is perhaps the most practical element of the new augmented reality device. Users can set the calendar such that it always appears in one of the screens on one of the lenses. This allows users to always have access to their current schedule without having to flip through a smartphone device.

Connectivity. Google Glass is supported by 3G and 4G connectivity including GPS support and Google Maps.

Google+ services. Via Google Glass, you can connect to Google+ as well and avail its corresponding services.

Weather forecast. The current weather forecast could be comprehended on the move on the Google Glass screen.

Google Search. Any Google product is simply incomplete without the groundbreaking Google search engine. The world's most popular search engine can be accessed on the screen of

Google Glass with just a simple voice command.

Video chats. Video chats and calls can be made on Google Glass.

In addition, the Google Glass features video gallery, Google images and the all-powerful Google Cloud. The system uses individual skin tone and hand shape recognition to ensure

that only one user's commands are followed.

The patent also mentions that the camera will be able to track the user's hand, allowing it to touch virtual controls via coloured dots in the heads-up display. Essentially, you will be able to interact with a user interface that sits right in front of your face.

User experience

Well, you just need to wear the device and look up at the sky, and a weather forecast will appear on the little screen over your eyebrow. Head down the stairs into the subway, and the glasses will show you whether trains are on time or not. Walk down the street and get turn-by-turn directions. See something you would like to share with friends, and the images your glasses shoot will go to their Google+ social-media accounts.

At the Google I/O conference, the product (Google Glass Explorer Edition) was first made available to United States Google I/O developers for \$1500, shipping early in 2013, while a consumer version is slated to be ready within a year of that.

According to Brin, that's just the beginning. He expects developers to use this device and help enhance its technology to produce unsurpassable results.

The Google Glass can potentially replace the mobile phone itself and show this world yet another technology phase shift, which Google is famous for! ●
