

High Performance LED Driver ICs Designed for High Power Factor & High Efficiency Lighting Solutions

Realised by easy-to-use development tools with high integration common platform and low BOM cost. In addition, Renesas' extensive lineup of MOSFETs are available in supporting a wide ranges of power characteristics required.

Non-Dimming System Diagram

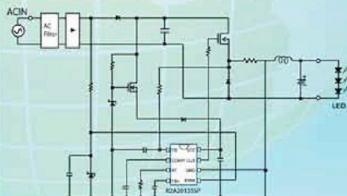

R2A20134 for Non-Dimming

Features:

- High efficiency > 92%
- High power factor > 0.95
- Low component count & BOM cost
- Low EMI
- Support isolated and non-isolated types of LED driver circuits

Dimming System Diagram

R2A20135 for Dimming

Features:

- High efficiency > 90%
- High power factor > 0.90
- Support leading/trailing edge dimmers
- No flickering issue
- Low component count & BOM cost
- Low EMI
- Support isolated and non-isolated types of LED driver circuits

Application

Tube Light

Bulb Light

Down Light

Bulb Light
