The CC2541 SensorTag

The CC2541 SensorTag is the first Bluetooth Smart development kit focused on wireless sensor applications and it is the only development kit targeted for smart phone app developers.

The SensorTag can be used as reference design and development platform for a variety of smart phone accessories.

As always international shipping is free when you order from TIeStore

CC2541 SensorTag features and benefits:

- The SensorTag works with TI's TPS62730 , and includes TI's TMP006 IR MEMS temperature sensor, humidity sensor, pressure sensor, accelerometer, gyroscope and magnetometer.
- SensorTag App containing software examples and access to tools available on App store.
- The CC2541 SensorTag kit shortens the design time for Bluetooth low energy app development from months to hours.
- The SensorTag is preprogrammed with the FW needed to get started with smart phone app development.

Offer starts on 12th June 2013 and closes on 31st July 2013.
Offer Valid for first 200 orders only.
