

Fig. 3: Simulation page

starters as it lets them simulate their models online and reduces the hassle of having to carry the model and simulator with them.

### Key features

DoCircuits supports schematic capture (or schematic entry), which is a step in electronic product design cycle where the circuit diagram (schematic) of the design is documented by a designer. It is done interactively with the help of a schematic capture tool also known as schematic editor. Typically, sketches are drawn on paper and then entered into a computer using a schematic editor. Schematic entry is a front-end operation of several others in the design flow.

DoCircuits gives you the ability to upload SPICE models directly

onto the simulator, thereby extending your flexibility and reach vis-a-vis other simulators. It lets you export netlists onto your circuit design and work with them along with the option to share your circuits via direct link or even Facebook. The simulator also has a library, which makes it easier for you to post or download circuits to work with.

### Advantages of DoCircuits

The simulator offers advantages for students, teachers and the institutes likewise. Students get to familiarise themselves with industry-level simulations and acquire real skills while maintaining a digital portfolio of their circuits on the cloud. This makes them confident on industry T&M devices while making them

### Steps to install DoCircuits on your system from EFY Plus CD

1. Install the offline CD on your Windows machine (Windows XP, Vista, 7 and 8 are supported)
2. Create your login by visiting [efy.docircuits.com](http://efy.docircuits.com)
3. Click 'login' and then 'SignUp' to create your account
4. Choose a username and password. You will receive an activation link from DoCircuits (check your SPAM folder in case you can't find it in your inbox)
5. Click the link in the mail to activate your account
6. Log-in into your offline version (installed version) of DoCircuits using the same login/password. You need to be connected to the Internet for logging on the offline tool only for the first time
7. You can use the login/password to access DoCircuits both online ([efy.docircuits.com](http://efy.docircuits.com)) as well as offline for a whole month

more employable. Teachers can use this simulator for assignments, thereby reducing the boredom and monotony normally associated with college assignments. Colleges can use it to dramatically reduce the cost associated with buying the licences for the traditional simulation tools and hence increase audit points which would help in accreditation. ●
