

board test based on the latest Embedded System Access (ESA) technologies.

The new model named RPS3000-S32XL provides an increased surface for multi-board panels up to 500 X 500 mm. Based on an enhanced SCANFLEX architecture with short wire interface for up to 32 sites, it supports double-sided probing for up to 3000 nails.

RPS3000-S32XL was developed for fast and reliable in-system programming of non-volatile memories such as Flash, microcontroller (MCU) and programmable logic devices (PLD). The system additionally allows for the combination of programming tasks with test strategies such as boundary scan, processor emulation, chip embedded instruments or functional test.

Pick and place machines for LED assembly

Manncorp has launched the MC-LEDV4 series of LED pick and place machines that are specially designed to place surface-mounted LED compo-

nents using four pick-and-place heads and 'on-the-fly' vision for fast, accurate alignment. With a high-precision, ball-screw-driven gantry providing multiple, simultaneous pick-up, the

MC-LEDV4 machines are capable of placement rates of up to 15,000 LEDs per hour (IPC-9850). Unlike SMT pick-and-place equipment that has merely been adapted for LED assembly, the MC-LEDV4 series is exclusively designed to be the ideal solution for long LED tubes, flexible strips, and panelised LED boards. Three models are available for either 600mm (24-inch), 1200mm (47-inch), or 1800mm (71-inch) substrates. All models can be purchased as standalone or inline systems.

TEST & MEASUREMENT

Flexible resolution oscilloscopes

For the first time in an oscilloscope, Pico Technology has used reconfigurable ADC technology to offer a choice of resolutions from 8 to 16 bits in a single product.

Unlike most digital oscilloscopes that gain their high sampling rates by

inter-leaving multiple 8-bit ADCs, the new PicoScope 5000 series scopes have a significantly different architecture in which multiple high-resolution ADCs can be applied to the input channels in different series and parallel combinations to boost either the sampling rate or the resolution.

MISCELLANEOUS

Green solar tubular battery

Elektro Power Systems has launched Elektro Green solar tubular battery.

It is said to be manufactured in an automated plant with the state of art technology using the inter-cell welding, pressure die cast, auto pasting and heat-seal automatic machines.

Notable features include design for longer shelf life; pressure die cast grids for best performance; selenium lead alloy that reduces heat; faster charging capability with low self discharge; superior life cycle; green plate charging that lowers pollution.

New version of computer module

Toradex is now offering an additional member of the widely used Colibri product family: Colibri PXA300 XT 208MHz. In addition to all of the features of Colibri PXA300 208MHz, the

XT version additionally offers audio input/output, four analogue inputs and touch functionality. It is qualified for extended temperatures ranging from -25°C to +85°C.

Pricing for XT version starts at ₹ 2630 for higher quantity slabs. This computer module is said to be a perfect fit for cost-sensitive applications.
