

Spot an Error

And WIN Award!

You can win one thousand rupees plus a certificate from the editor of Electronics For You magazine if you spot and report any factual error in the latest issue of the magazine. Your report will be published in a coming issue of the magazine, giving credit to you.

Though every care is taken in preparation of the content for the magazine, an error can slip in at times. So we invite our learned readers to point out any error that they spot, for the benefit of the other readers.

Rules:

- The error has to be reported before end of the month that is mentioned on cover of the magazine
- The report has to be sent in writing or by email addressed to the Editor, EFY Magazine (editsec@efyindia.com)
- The error should be of factual nature, in the information published in the magazine, and not a grammatical or syntax error
- The correct information should also be provided along with the error spotted by you
- In case more than one person reports the same error, the one whose report reaches us the earliest will get the award money
- In case two or more persons jointly report an error, the award money will be divided amongst them
- EFY employees, their family members and friends, and EFY associates and their family members and friends are not eligible
- Decision of the editor will be final in this matter

electronics
FOR YOU

From Facebook: EFY's Electronics Design Community

I received a gift, green power charger-cum-torch, from EFY. It has a 1850mAh battery inside, which can be charged through 220V AC and reused to charge the battery of any gadget that supports 5V DC. It can charge mobiles, iPod, MP3 players, etc. Thanks to EFY's Electronics Design Community for giving this gift and selecting me in the top ten contenders' list.

Sumit Vaish

From electronicsforu.com: Circuit Lab

This is regarding 'Bhajan and Mantra Chanting Amplifier' circuit published in March issue. Great article, thank you for publishing it!

Pokey

□ 'Cellphone-Based Remote Controller for Water Pump' circuit published in January 2013 issue is a very nice project. I am from a farmer's family and usually have that problem in my farm. Therefore this circuit is very helpful for me, thank you!

Prafulla

□ Can you please upload the circuit video of 'Cellphone-Based Remote Controller for Water Pump' circuit published in January issue.

Shibin Thomas

EFY: Thanks for the appreciation and feedback. Regarding circuit video, we have already uploaded it on www.efymag.com website.

version of ezine, where the complete magazine is available as a Flash file, and you can view it from the front cover till the back cover (including ads). For any problem, contact our support team. They will send you your login ID and the method to use this new tool. Hope you will enjoy it, especially if you have decent Internet bandwidth.

But this tool will allow you to view only those issues that fall within your subscription period. Plus, it does not download the file on your PC, but downloads it in real-time every time you click on any issue. The last bit, we are trying to improve and your problems should be resolved in a few months time.

3. When we shifted our subscribers from EFY CD to without CD, we had increased their subscription period in proportion to the amount to be compensated for removal of the CD. Plus, we have special offers for without-CD subscribers to convert to EFY-Plus. If you are interested, our customer support team can send details about that too.

Phone Bell Auto Silencer

Regarding the 'Phone Bell Auto Silencer' circuit published in October 2012 issue, I would like to know whether the user could set any time for which the phone remains silent. Is it possible

to give just a switching arrangement to select various R3 and C3 combinations in order to have different time periods for the circuit?

Dezzire

Through e-mail

The author Raj K. Gorkhali replies:

You can use 10M preset VR1 in place of R3 and 100µF in place of C3. These combinations can give different time periods for the circuit.

Digital Drawing Pad

I am assembling the 'Digital Drawing Pad' project published in September 2012 issue. My prototype is ready but I couldn't get the touchscreen as mentioned in the text. Moreover, I have doubt in the schematic. Pin 5 connection is used in the circuit but in the text it is mentioned as 4-pin resistive type. I have a capacitive touchscreen, which is of the same size as shown in the author's prototype. Please clear my doubt.

Jijo P. Varghese

Palavakkam, Chennai

The author Vineet Nayak replies:

There is an error in the diagram. There is no fifth pin that needs to be connected to ground. Use a 4-pin resistive touchscreen, ignoring the fifth pin (Gnd). It should be available at any mobile repairing/accessories shop.
