

Optimizing PLC Network Deployment

- Best-in-class performance ensures high network capability
- Advanced efficiency simplifies configuration and monitoring
- Maximum flexibility converges various applications

Moxa's integrated industrial Ethernet solutions can optimize your PLC network performance, efficiency, and flexibility. Benefits include high network availability, enhanced SCADA monitoring of network devices, simplified configuration and manageability, and flexible network deployment of large-scale automation control systems.

Download our **Optimizing PLC Network Performance and Management** white paper to learn how to optimize your PLC network infrastructure.

Industrial Ethernet Switches

EDS-600 Series Modular Design
8, 8+3G, 16, 16+3G-port

EDS-405A/408A Series Plug-n-Play
5 and 8-port

- Plug-n-play switches
- 10s fast-booting time
- 20 ms Turbo Ring/Turbo Chain Ethernet redundancy
- Complete status parameters for easy SCADA monitoring

Industrial Ethernet Gateways

MGate 5101-PBM-MN
1-port, PROFIBUS-to-Modbus TCP

MGate 5102-PBM-PN
1-port, PROFIBUS-to-PROFINET

MGate 5105-MB-EIP
1-port, Modbus-to-EtherNet/IP

- Up to 16 fieldbus connections (Modbus model)
- Innovative one-click configuration for fieldbus communications
- Protocol analyzer and relay output warning
