

64-Kbit I²C & ISO 15693 Dual Interface EEPROM

STMicroelectronics

M24LR64-R, 64-Kbit EEPROM with I²C and 13.56 MHz ISO 15693 RF interfaces

The innovative family of Dual Interface EEPROMs provides new features and capabilities. The EEPROM memory bank can be accessed either by a low-power I²C interface or by an ISO 15693 RF interface operating at 13.56 MHz. In addition, the family features a 32-bit password protection mechanism.

Dual Interface EEPROMs are able to transmit information from the heart of the application either to an ISO 15693-capable NFC smartphone or to an industrial RFID reader.

This new type of wireless memory enables on-board energy savings and provides easy and convenient remote access to electronic product parameters.

Key features

- Industry standard interfaces:
 - I²C: 400 kHz, from 1.8 to 5.5 V
 - ISO 15693: 53 Kbit/s data rate, up to 1 m remote access range
- 64-Kbit EEPROM user memory
- 64-bit unique identifier
- 32-bit password protection
- 13.56 MHz carrier frequency

Two worlds connected

The ability to program or read a memory using either an RF or a wired interface enables designers to imagine and develop new functions and capabilities for their products. It is a good fit for a wide range of applications including:

- medical equipment
- industrial equipment
- factory and building automation
- computers and peripherals
- consumer electronics

Key benefits

- Most flexible solution for parameter updates
- Passive RFID technology: no on-board power required to access the device in RF mode
- High reliability EEPROM
- Flexible password protection scheme
- Simple and cost-effective implementation
- Enabling new functions and capabilities for:
 - parameter update
 - firmware update
 - device calibration
 - product activation
 - traceability information management
 - asset tracking
 - identification
