

Integrate 3D Tracking & Gesture

With Microchip's GestIC® Technology

Microchip's GestIC® Technology is a patented 3D sensor technology which utilizes an electric field (E-fields) for advanced proximity sensing. It allows realization of new user interface applications by detection, tracking and classification of a user's hand or finger motion in free-space.

- Lowest power 3D sensing technology
 - Approach detection at down to 45 μ A at 3.3V
- From 0 (touch) up to 15 cm detection range
- On-chip 3D Colibri Gesture suite
 - Approach detection
 - Free space gestures based on advanced statistical matching
 - xyz hand position with up to 150 dpi resolution
- No ambient influences (light, sound)
- I²C™, SPI digital interfaces
- 32-bit digital signal processing unit
- Fast data sampling at 200 Hz
- No detection blind spots
- Automatic calibration & frequency adaption
- Flash based architecture allows in-field updates
