

3D Smartphone

Micromax 'Canvas 3D' -A115 provides users with a hassle-free rich life-like experience

Micromax has introduced its first 3D phone—Canvas 3D (A115) which requires no 3D glasses to view its content. Powered by a 1GHz dual core processor, the smartphone promises superior quality graphics, multi-tasking and improved application performance. Canvas 3D comes with a 12.7cm (5-inch) full touchscreen and runs on Android 4.1.2 (Jelly Bean).

Packed with a 2000mAh battery, the phone provides a talktime up to 4.5 hours ensuring a strong battery backup. The phone sports a 5.0MP rear camera with auto focus and features a 0.3MP front camera. Users can also convert the regular pictures into the 3D format. The 3D-enabled A115 helps users in faster browsing, downloading attachments and watching streaming videos.

With an expandable memory of 32 GB, the phone supports Bluetooth 4.0 and Wi-Fi, ensuring full-time connectivity for the social media buffs. The phone comes with 'Micromax 3D Space' giving them access to 3D videos and pre-loaded 3D games.

Superzoom Camera

Latest in the bridge camera category from Fujifilm combines a high-precision 42X optical manual zoom with stunning autofocus

Fujifilm India has further expanded its category of 'superzoom' bridge cameras with the launch of FinePix HS50.

With a high-precision manual zoom of a massive 42x that translates into a focal length range of 24 mm to 1000 mm, is an all-in-one high-speed performer with an ability to capture images with crisp quality. It offers focal lengths which would require several different lenses on an DSLR.

Coupled with its optical manual zoom is its fast autofocus speed of just 0.05 seconds that makes it a quick-fire shooter. The inclusion of Phase Detection pixels on the sensor helped achieve an incredibly fast autofocus speed of just 0.05 seconds in fastest conditions. The newly-developed 42x FUJINON zoom lens offers the precision of a manual zoom and the optical performance for which FUJINON lenses are world renowned.

The camera that comes with a built-in stereo microphone is capable of full HD movie recording (1080p) at up to 60 frames per second. All you need to do is connect an external microphone to the dedicated input and you can get an amazing sound to rival the image quality.

One can also record lower resolution movies at up to 480 frames per second—and capture some amazing slow motion action. The Phase Detection pixel technology and scene recognition modes are applicable even when recording movies to ensure that your masterpiece stays focused on faces and the action without losing sight of your subject.
