

Coming soon: An affordable robot for household chores

British inventor, Sir James Dyson, is working on an affordable robot to carry out chores around the house. Sir James said soon a new generation of robots that understand the

Twendy-One, a humanoid robot in action

world around them will be able to clean the house, put out the bins and even keep an eye out for intruders." Sir James claims his firm is currently competing with Japanese rivals to become the first to create an advanced generation of household robots. Twendy-One, a humanoid robot that can help with housework and nursing care, has already been unveiled by Waseda University in Tokyo and will be on sale within a few years.

It has also been speculated that Google is building an Android army after recently acquiring a number of robotic and artificial intelligence companies. According to him, domestic use will be the initial focus of the research. What robots need to function in the home is vision and the ability to interact intelligently. In a complex environment—the home or garden—a machine must understand and perceive. This technology will have a wide range of applications.

Crawling lizard-like robots for cleaning spaceships

The engineering department of Simon Fraser School of Engineering has developed the gecko-technique-inspired lizard-like robot that can climb and crawl. According to the European Space Agency, this lizard-like robot will help in maintaining a fresh and clean wall inside the spacecraft. The maintenance service of the walls of a spaceship has now become easier after the development of the gecko-technique-based robots.

BINAY Multichip LED Lamps

High reliability direct-retrofit LED bulbs for Control and Instrumentation applications

Ba9s bayonet pin cap

E-10 screw cap

Midget Flange cap

Midget Groove cap

5530 and 6844 slide base

Wedge base

Simple retrofits for existing filament bulb holders, in applications such as annunciator window (fascia) backlighting and illuminated pushbutton switches, where the reliability of indication is important or where lamp replacement is difficult or expensive

- Long life (typically 100,000 hours)
- Low power consumption;
- Low heat generation
- High brightness and wide-angle light emission
- Shock-proof and vibration resistant
- High reliability of indication
- One-time Expense

Binay Opto Electronics Pvt. Ltd.

44, Armenian Street, Kolkata 700 001, India
Telephone : (033) 2210 2039, 2210 3907, 4006 9875
email : info@binayled.com
Fax : 91-33- 2242 1493 <http://www.binayled.com>

INVENTING NEW TECHNIQUES OF PRODUCING LIGHT

BINAY PowerLED Inspection Hand Lamps utilize a light source comprised of multiple high power white LEDs

- Very low power consumption of 10 watts or less
- Long life (over 50,000 burning hours), covered under 3-year warranty
- Unbreakable shock-proof and vibration-resistant construction; cool light output with no heat radiation
- Glare-free light output, focusing only on the work area
