

Designing with FPGAs

Field-programmable gate arrays (FPGAs) are the ICs that can be programmed by the users to perform any logical function after they have been manufactured. Here are some websites that can help you understand and program the FPGAs even better

FPGA Arcade

This site contains the code for a number of classic games/systems that can be run on off-the-shelf FPGA boards. If you are a hobbyist or gamer who likes to play with electronics, some of the interesting experiments, views and comments available on the site may help. This website is about recreating gaming hardware from the past in modern programmable devices, known as FPGAs. The latest variants of the Opencores T65 and T80 CPU cores can be found on the library page. You can buy modules that drop into old arcade boards and replace Namco/Konami/Commodore 64 custom ICs as well as the standard TTL chips.

FPGA Tutorials

Xilinx is the world's leading provider of all-programmable FPGAs, SoCs and 3D ICs. These industry-leading devices are coupled with a next-generation design environment and IP to serve a broad range of customer needs, from programmable logic to programmable system integration. The website has a dedicated section on FPGA tutorials. It has tutorials on ISE design suite, ChipScope Pro and embedded development kit.

FPGA Developer

This website has different tutorials for FPGA designers. Though the site has not been recently updated, it is a good resource for FPGA lovers. Apart from the tutorials, the site has a section for useful links that can be of interest to FPGA developers.

FPGA 4Fun

FPGA is a wonderful technology but can be intimidating. This is what Jean P. Nicolle, the creator of this website, believes. As many FPGA vendors are providing affordable parts and free tools, this is the right time to learn, claims Nicolle. FPGA 4Fun provides you information on FPGAs and FPGA projects to build with an FPGA board. It provides great examples and a great learning experience for beginners as well as professionals. The website reflects the author's experience and opinions on FPGA technology.

FPGA Central

FPGA Central claims to be the world's largest FPGA and CPLD portal. The site provides a central place for FPGA and CPLD vendors and users to share experiences and information about FPGA design, development, verification, validation, process, tools and products. FPGA tutorials on the site have been created by 1-CORE Technologies—an FPGA design services provider.
