

NEW PRODUCTS

RECENTLY INTRODUCED IN INDIA, FROM NEAR AND FAR

COMPONENTS

Power amplifier module

RFMW, Ltd has announced RFPA2026, 700MHz to 2700MHz 2W power amplifier module from RFMD.

The RFPA2026

is a three-stage module with independent bias control for each stage plus the ability to bypass the first stage to reduce gain and power consumption.

With all stages active, the RFPA2026 provides 38 dB of gain at 2140 MHz with a corresponding P1 dB of 33 dBm. External matching and bias control allows the RFPA2026 to be optimised for various applications including small cell power amplifiers and ultra-linear driver amplifiers.

Current protection relay

Nuteck Products has announced a current protection relay, which can work at system supply voltage—70 VAC to 300 VAC. It uses programmable power on delay 0-60 sec. It detects negative phase sequence.

Other features include non-volatile memory for data retention, phase unbalance detection as per NEMA, very low burden on measurement and AUX circuits, three-digit, seven segments LED display and front panel switches.

It is mostly used wherever a three-phase motor is used.

It is suitable in manufacturing of generator panel/AMF panels. It is used in power distribution panels. It is also applicable in induction heater control panels and air purification plant.

Automotive system-on-chip

Renesas Electronics has announced a new member of the R-Car series of automotive system-on-chip (SoCs). Capable of delivering more than 25,000 DMIPS, the R-Car H2 provides high

performance and 3D graphics capabilities for high-end multimedia and navigation automotive systems.

The R-Car H2 is powered by the ARM Cortex-A15 quad-core configuration running an additional ARM Cortex-A7 quad-core—the industry's first implementation of a Quad ARM Cortex-A15 and the big.LITTLE processing technique in an automotive SoC.

White LED step-up converter

HTC-Korea has launched the LM1938, a step-up DC/DC converter specifically designed to drive white LEDs with a constant current. The device can drive up to 27 LEDs from a 5V supply.

Additional feature include output voltage limiting when LEDs are disconnected.

The LM1938 uses a constant frequency, current mode control scheme to provide excellent line and load regulation. At the start of each oscillator cycle, the RS latch is set, which turns on the power switch Q1.

MCU Series

Nuvoton Technology has launched the new NUC200 series 32-bit Cortex-M0 microcontroller. The NUC200 series provides the high 50MHz operating speed and includes ISO-7816-3, USB

2.0 FS, VBAT supply for RTC and 12-bit ADC, which makes it ideal for consumer electronics and industrial control applications.

The NUC200 series features 50MHz high speed and supports 32-bit multiplier, structure NVIC (nested vector interrupt control), dual-channel APB and PDMA (peripheral direct memory access) with CRC function. In addition, the NUC200 series is equipped with Flash memory ranging from 32 kB to 128 kB, SRAM from 8 kB to 16 kB, 8-channel 12-bit ADC, high-performance communication peripherals, such as UART, SPI, I2C, I2S, ISO-7816-3, USB 2.0 FS devices, VBAT supply for RTC.
