

TOOLS & EQUIPMENT

Dual-channel arbitrary function generator

GW Instek is launching AFG-2225, its first basic level dual-channel arbitrary function generator, which provides superior features in its class. Both channels are equipped with the same characteristics to fit dual-signal ap-

plications such as differential or IQ signaling. The outstanding cost-performance value makes the AFG-2225 a practical instrument to accelerate the development process.

The major features for both channels include 10Vpp output amplitude; 25MHz frequency bandwidth with 1μHz resolution; built-in waveforms of sine, square, ramp (triangle) and noise. Its 1-99 per cent adjustable duty cycle of square waveform can be used as pulse signal sources.

Thermoelectric coolers

Pulse Digital Devices has launched peltier/thermoelectric coolers. The structure of thermoelectric modules is generally described as elements of n and p type thermoelectric material sandwiched between two ceramic plates and connected in series.

The elements are solid-state, vibration-free, noise-free heat pumps, which move heat from one surface to another when a direct current electricity is applied to it. If the heat at the hot side is dissipated to the ambient environment by a heat sink, this assembly becomes a cooling unit.

Lead forming machine

HEDA-Saiko Group (Hong Kong) Ltd has launched HEDA-804J automatic loose radial lead forming machine.

This is an automatic high cutting and forming machine. It integrates high precision mechanical movement and is air-driven to complete automatically the capacitor feeding, value check, shaping, polarity test, cutting, leg, etc. This machine can be used for other loose radial components also.

TEST & MEASUREMENT

Field bus integrity testing

Cyronics Instruments Pvt Ltd has introduced Scopix Bus, a standalone four-channel instrument with a 200MHz bandwidth for field bus integrity testing. This instrument can be used to perform the electrical measurements required to assess the integrity of field buses, i.e., the operation of the physical layer (electrical specifications, synchronisation, etc), in compliance with the applicable standards.

Following just three simple steps, Scopix Bus can diagnose the integrity of a field bus. The result is also displayed very explicitly as 'smiley' icons in colour. 14 buses (KNX, DALI, CAN, LIN, FlexRay, AS-i, Profibus, RS-485, RS-232, Ethernet etc), 21 configurations and several protocols (IP, TCP, Modbus, Profinet etc) are already integrated in it. It is also possible to create

new buses or configurations with the SX-Bus software.

Handheld oscilloscopes

Agilent Technologies has launched U1600 series handheld digital oscilloscope which offers maximum versatility for current and future needs. The new U1610A and U1620A oscilloscopes of the series include two isolated input channels, certified to CAT III 600 V, that protect users and prevent damages to devices when performing floating measurements.

The U1610A has a 100MHz bandwidth and 1GSa/s sampling rate while the U1620A provides 200MHz bandwidth and 2GSa/s sampling rate. With a maximum memory depth of 2 Mpts, users can capture non-repeating signals such as motor start up sequence and transient waveforms without sacrificing signal details.

Chip-on-board LED downlights

Osram Opto Semiconductors has introduced highly-efficient Soleriq-LED series downlights. The first chip-on-board LED with a high luminous flux provides high-quality background lighting in professional applications and is suitable for use in shopping malls, offices, industrial
