

buildings and high-end residential premises.

Even at high application temperatures the new LED series create the basis for highly-efficient luminaires with a luminous flux of 1500 lm to 4500 lm, and only one Soleriq-E-LED is needed to give a luminaire enough light. This makes the designing of luminaires much easier because only one component has to be integrated instead of lots of LEDs.

Portable emergency flood light

Binay Opto Electronics Pvt Ltd has introduced its new portable 10W PowerLED emergency flood light. It is a rechargeable compact lighting solution with its own 12VDC battery pack. Offering battery life of approx. five-six hours, the solution features 1000 lm of white light, which is said to provide excellent illumination with good brightness for working in confined areas.

According to the company, light module can be dismounted from the battery pack as it has its own cable of 1 to 2m length. Also, shoulder straps can be provided so that the product can be carried easily.

The unit has a maintenance-free sealed lead-acid battery with a one-year performance warranty. The charging circuit is in-built into the pack, and just needs to be connected to a power outlet. Over-charging cut-off and deep discharge cut-off have been provided to prevent damage to the battery.

Ultra-compact AC-DC power supplies

Emerson Network Power has launched two ultra-compact AC-DC front-end power supplies that meet the 80 plus

Platinum standard for efficiency. Rated at 750 W and 1100 W continuous output, the power supplies share the same form factor, providing the scalability that system designers need for long life-cycle applications where power requirements may change in the future.

Designed primarily for space-constrained, high availability applications such as 'always on' enterprise servers, Emerson's new 750W DS750PED and 1100W DS1100PED power supplies are both housed in 1U high rack-mounting enclosures measuring just 86.3 mm x 196.5 mm.

Automatic circuit breaker

Portex Technologies has introduced automatic circuit breaker, which switches off in condition of current overload and automatically switches

on when the supply normalises. It operates on the principle of a bimetallic switch. The current carrying bi-metal strip senses over current and actuates a beryllium copper blade which snaps open the contacts and interrupts the current. After some time the bimetal cools down and the contacts snap close.

The snap action opening and closing of contacts ensures that there is no sparking during the make and break switching. These contacts are made of solid silver and have a very long life. The outer body is cylindrical in shape

and has a small size due to which it can be easily fitted in any device or instrument. It can also be mounted on a PCB.

Solar water heater for hard water areas

Considering the growing demand for high-pressure solutions in hard water areas, Emmvee Solar, a manufacturer

of solar water heaters in India, has announced the launch of a new range of Solarizer Ultra water heaters in association with Solarcap Denmark.

The company claims that their Solarizer Ultra system will combine the benefits of Emmvee's glass-enamelled tank technology with a heat exchanger system to provide a solution for consumers in hard water areas.

Infant protection system

BioEnable Technologies has introduced a new infant protection system for new-born's identification, monitoring, tracking and security solutions.

Based on wireless technology, the transmitter tied to the ankles of young ones ensure that the right person is attending the baby while keeping a track of his movement inside the hospital. The introduction is seen as a major relief against issues including infant abduction and baby mix-up that has been a common fear among hospital administrations for quite some time now.
