

On the other hand, large-size tablets offer larger screens and higher resolutions. The bigger the screen, the better the viewing experience. Large screens are better suited for watching movies and gaming with their increased real estate. The large size of the device allows the manufacturer to load it with a powerful processor, resulting in better quality display resolution. Their fast processing capability offers smooth viewing experience for games and movies.

While buying a tablet PC, you should check the quality of display. There are certain parameters that will help you determine that quality. First, a tablet with 1280 × 800 pixels is a must for display these days. The quality of videos or movies available requires you to at least have an HD display, if not Full HD. The tablet should also have an in-plane switching (IPS) or plane line

switching (PLS) panel, which maintains image quality from different angles and offers vibrant display with accurate colours.

Not too heavy on hands

Tablets, unlike smartphones and even phablets, can be on the heavy side. Carrying these devices in hand for a long time could be uncomfortable. Light tablets are said to be on the flimsy and fragile side, while the heavier ones present their own issues. Before buying a tablet, you should try it out in your hand to get the feel of the device. Small tablets should fit into a pocket without too much of fuss. Of course, when you are buying a calling tablet, the weight matters a lot.

Now that you have checked out the tips, given below is brief information about some dual-SIM based tablets available in India.

Karbonn A34

Karbonn had introduced its A34 calling tablet recently. The tablet comes with a 17.7cm display and runs Android 4.0 *aka* Ice Cream Sandwich platform.
