

LG G2 has excellent display quality

LG G2 comes with the Corning Gorilla Glass 3 and an IPS display to give you excellent display quality

The latest buzz in the smartphone market is the recently launched LG G2. The all-new LG G2 has a 13.2cm (5.2-inch) Full HD IPS display that has a resolution of 1920x1080 pixels. It comes with the Corning Gorilla Glass 3 and a 13MP OIS rear camera that has 8x digital zoom. It also has a secondary 2.1 MP front camera that comes with an LED flash.

The LG G2 is based on the Android 4.2.2 (Jelly Bean) OS and is powered by a 2.26GHz quad-core processor, along with a 2GB RAM that offers speed and performance like never before.

This smartphone also delivers great sound quality. Its other interesting features include being enabled with GPRS, EDGE, 3G and Wi-Fi. It also has Bluetooth and USB to let you transfer files to other mobiles and devices.

This phone runs on a 3000mAh Si+Li-polymer battery that gives you longer talk time and standby time. It has an internal 32GB memory that lets you store all you want in one single place. The LG G2 is now available on Infibeam.

An ultra high definition smart TV

Samsung UHD F9000 has over eight million pixels and a resolution four times higher than Full HD

Samsung Electronics has unveiled its latest smart TV technology with the F9000 series of ultra high definition (UHD) TV. The Samsung UHD F9000 has over eight million pixels and a resolution four times higher than Full HD. Samsung has added 139.7cm (55-inch) and 165.1cm (65-inch) screen sizes to its F9000 series, which includes the 215.9cm (85-inch) 85S9 UHD TV.

The LED panel produces details, optimal colour and contrast—all complemented by the Quadmatic Picture Engine, the powerful picture processing technology. No matter what the source of the content is—SD, HD or Full HD—the Quadmatic Picture Engine adapts the source image, eliminates visual noise,

and improves the details and sharpness of the image before finally upscaling the picture to be displayed in UHD. In addition to sharper images, through the Precision Black Pro technology and Micro Dimming Ultimate features, the F9000 UHD TVs offer excellent brightness, good contrast with the deepest blacks, and real UHD resolution using proprietary algorithms for superior images.

The UHD F9000 design hides the built-in speakers and subwoofers that deliver a powerful 70W sound experience, and the One Connect Box eliminates cable clutter by aggregating all connectors from multimedia players.

Nokia Lumia 1020 reinvents the zoom

With the arrival of Nokia Lumia 1020, Nokia establishes a new benchmark in smartphone imaging

Nokia has recently unveiled the much-awaited addition to the Lumia family in India—the Nokia Lumia 1020, which establishes a new benchmark in smartphone imaging. Boasting a second-generation 41MP sensor and optical image stabilisation (OIS), Nokia Lumia 1020 reinvents the zoom, enabling people to discover more detail than their eyes can see. With Nokia's innovative PureView technology, the device is able to produce

some of the sharpest images delivered by any digital camera.

This is possible due to leading hardware technology, combined with a new application called Nokia Pro Camera, which makes it easy for anyone to take professional-quality images. Either before a picture is taken or after it has been shot, the zoom capability enables people to shoot first and then zoom later to discover and rediscover more details than the eye can see.
