

# ELECTRONICS ROCKS 2013:

## An Overview

For those of you who missed the show, here is an image-filled report on all that happened at Electronics Rocks 2013—the design engineers' conference and expo that rocked Bengaluru last month

With an aim to create India's most exciting platform for its electronics design engineering community, the second edition of Electronics Rocks 2013 was held at NIMHANS Convention Centre on October 5 and 6. As the saying goes, "A picture is worth a thousand words," so here are select pictures highlighting various keynote addresses, star speakers, workshops, expo exhibitors, innovation demos, et al, at this year's eRocks conference.

### Our Audience

More than 1300 delegates attended the talks and workshops at e-Rocks conference. The audience comprised electronics design engineers, industry experts, academicians and engineering students.

### Workshops

Originally scheduled for just one session, each workshop was conducted multiple times due to the overwhelming response. The workshops were on:

1. Turn your Product Idea into a Prototype, the Arduino Way, presented by Nipun Kanade
2. How to Build your Own Industrial Robot, presented by Biju R. Varkey
3. 90 Minutes to Build Your First Android App + First Arduino Program + Interface, both presented by Vinay Chaddha
4. Multiphysics for Design of Electronic Devices, presented by COMSOL
5. Build a Wireless Robot in 60 minutes, presented by Kits'n'Spares
6. The Fundamentals of Innovative Embedded Systems, presented by Sreejith Krishnan, Betty Row and Jaemin Lee from MDS Pacific

### IOT Sessions

The Internet of Things is by no means a new topic. However, the initial definition no longer holds true today as a sea change has happened in the 30-year

timeline of the Internet of Things. What started off with RFID tags simply identifying different devices has now grown into a system envisioned to automate almost every aspect of human life.

Some of the key IoT sessions at eRocks 2013 were:

1. Automotive IoT: Connected Car Technologies by Kartik Gopal, general manager for Mobility Solutions and Business Development, Mahindra Reva Electric Vehicles Pvt Ltd
2. Leverage Wi-Fi for your IoT Project by Jithu Niruthambath, director, Calixto Systems
3. M2M, IoT & Beyond...The Changing Perspective by Narang Kishor, Namix Technolabs
4. How we Designed an IoT Enabled Security System by T. Anand, MD, Knewron
5. Bluetooth 4.0 and IoT by Janardan Revuru, project manager, Hewlett-Packard

### Raspberry Pi Sessions

Raspberry Pi has taken the world by storm, and it is one of the most popular single-board computers available in the market. At this conference people were shown how they could make a commercial product with the Raspberry Pi—and sell it successfully! Some of the sessions were:

1. From Fruit to a Fruitful Idea—18 Months in the Life of Pi, by Ravi Pagar, MD, Element14
2. Making R-Pi Designs that Sell: How we Made US \$1,27,500 in 40 Days! by John Cole, founder, Dexter Laboratories
3. Innovations for the 21st Century Using Raspberry Pi by Hari D.K., co-founder, FluxGen Technologies
4. How to Create Cost-effective Commercial Solutions with the Raspberry Pi by P. Chow Reddy and S.A. Sadiq from ICOMM Tele Pvt Ltd
5. How to Use Raspberry Pi and MATLAB for Real-time Image Processing by Pallab Maji, senior research fellow, NIT Rourkela
