

launched its desktop series of compact, reliable and economical automatic SMD pick and place machines. NeoDen's 220A and 240A machines can accommodate 12 reels of passive components of sizes 0402-5050 and four reels of ICs (SOPs and QFN).

The machines have a maximum placement speed of 7000 components/hour with a position accuracy of ± 0.025 mm. A maximum PCB size of 400 mm x 360 mm is possible on the machine. These machines are ideal for R&D organisations, LED manufacturing units and mid-volume EMS companies. The machines are low-cost, highly accurate in placement, don't make a noise, and have two heads for high-speed operation.

3D solid modelling and assembly tool

RS Components and Allied Electronics have launched the DesignSpark Mechanical—a new 3D solid modelling and assembly tool that is available for free. Developed in conjunction with SpaceClaim, a provider of flexible 3D modelling software for engineers, the new easy-to-use DesignSpark Mechanical will bring major benefits to design engineers around the world and is available in multiple languages, as per sources within the company.

The use of DesignSpark Mechanical early in the design cycle can eliminate much of the time-consuming rework associated with traditional product development processes.

TEST & MEASUREMENT

Industrial digital multimeter

IDEAL Industries has launched the 61-498 digital multimeter that measures

of auto/manual ranging and true RMS measurements to the user-friendly benefits of auto backlight and dual display.

The 61-498 digital multimeter includes a 100,000-count display, peak hold, auto hold, a high-voltage indicator, high-frequency rejection mode, data acquisition, data logging and data storage.

Thermal imaging cameras

FLIR Systems has launched the new FLIR Ex-Series, which are feature rich and extremely affordable thermal imaging cameras. These cameras are ideal for electrical and mechanical inspections, where their ability to detect potential problem areas means that installations can be quickly and easily inspected, and breakdowns avoided.

For building inspectors, the FLIR Ex-Series enables detecting insulation losses, inspecting under-the-floor heating and many other building related anomalies. FLIR Systems, Inc., New Delhi

Signal and spectrum analyser

The R&S FSW67 from Rohde & Schwarz is a new high-end signal and spectrum analyser with unique features like a frequency range up to 67 GHz, an integrated preamplifier up to 67 GHz, and an analysis bandwidth as high as 320 MHz.

The analyser helps developers perform complex measurement tasks in the microwave range for aerospace and defence applications, as well as wireless communication. The R&S FSW67 is claimed to be the only instrument in the market to cover the frequency range from 2 Hz to 67 GHz in a single sweep.

The R&S FSW67 simplifies test set-ups. It does away with external harmonic mixers and therefore requires no complex cabling. Image frequencies and other spurious emissions caused by harmonic mixing are suppressed.

SECURITY SOLUTIONS

Light-sensitive HD cameras

Bosch Security Systems has launched the next generation of mega-pixel cameras—the DINION Starlight HD 720p and FLEXI-DOME Starlight HD 720p RD. The company claims that these cameras are specifically designed for high performance in extreme low-light conditions.

The cameras supposedly represent a breakthrough in light sensitivity in cameras—showing colour images where other cameras can show only black and white, and showing black and white images where others show no image at all.
