

Pocket Routers: The Best Way to Stay Connected

If you are using multiple devices and are fed up with separate Internet connections for each of your gadgets, a pocket router is the solution for you. Carry it anywhere you go and connect many Wi-Fi devices to it

all the time is the order of the day. And pocket routers help us stay connected the most. They are portable, small-sized Wi-Fi devices that have the capability of becoming a Wi-Fi hotspot. When connected to the

Internet connection with their friends while on a leisure trip or with family members at home.

A pocket router is normally a credit card-sized device and weighs less than 100 grams. Since the trend of acquiring a variety of mobile devices is catching on in India, the demand for pocket Wi-Fi routers is also increasing at a fast pace. There are a host of companies offering different kinds of pocket Wi-Fi routers with different functionalities. You can choose one according to your budget and needs. The various types of pocket routers available are listed below.

DIKSHA P GUPTA

One of the days when we remained loyal to one single device. Being connected with the world through multiple devices

Internet, these pocket routers allow multiple devices to share a single Internet connection. In other words, this device can provide Internet connectivity to several devices wirelessly. With a pocket router, users can share an

SIM-based Wi-Fi hotspot devices. You have to buy a separate SIM card from a telecom service provider and insert it in this device, prior to activation. After this, connect the router to
