Eye Pattern Simulations

Inaccurate S-parameter data

Accurate S-parameter data

VectorStar™ now with DifferentialView™

High quality S-parameter data leads to high quality simulations with the new VectorStar MS4640B.

With VectorStar's industry-leading low frequency measurement capability to as low as 70 kHz, coupled with upper frequencies to as high as 110 GHz, ensure that simulation-busting DC-extrapolation and causality issues are minimized so that your simulations match reality.

DifferentialView adds true mode stimulus capability for when you need it with non-linear devices.
