

First Phone with Urdu Language Support

Nokia 114 comes with cloud-accelerated Nokia Xpress browser and easy swap technology

Nokia has come up with Nokia 114 budget phone, which has Urdu language capability. Priced at ₹ 2579, the phone is the first ever phone to have the Urdu language option in India. Nokia also said that this is an effort to expand the reach and benefits of mobile telephony for the consumers.

According to reports online, the newly launched Nokia 114 has the cloud-accelerated Nokia Xpress browser. This browser allows users to use up less data by compressing websites on the cloud. The data usage is less by up to 90 per cent. In addition, the phone, which has dual-sim capabilities, has also been given an extended battery life by Nokia. It provides 10 hours of talk time and almost one month's standby time.

The dual-SIM phone also has Nokia's easy swap technology, using which users can switch from one SIM to the other easily and quickly, without having to remove the phone's battery or turn the phone off. This feature of the phone can remember up to five different SIM cards, which gives the user full control over their phone bills. Since 2008, Nokia is the first mobile phone maker to have provided 11 Indian languages on their phones.

Galaxy Gear Smartwatch

As of now, it is said to work only with Galaxy Note 3 but it is being reported that Galaxy S4, S3 and Note 2 will be receiving a software update for the smartwatch support

We all were expecting Samsung to surprise everyone at its recent IFA press event, and that is exactly what the company did. The company unveiled its first wearable computer technology—Galaxy Gear smartwatch at the press event.

However, what surprised us more was the fact that Galaxy Gear will work only with the company's high-end smartphones. As of now, it is said to work only with Galaxy Note 3 but it is being reported that Galaxy S4, S3 and Note 2 will be receiving a software update for the smartwatch support.

Coming to the smartwatch, it can show its users notifications that appear on the phone like messages, calls, e-mails and other alerts. You can accept

or dismiss the notifications right from the smartwatch. An interesting feature is its smart relay feature, which click opens the notifications on your smartphone as it is being pulled out. You can use the swipe-based interface or make use of the Samsung's S Voice feature.

Other specifications include a 1.9MP shooter that works with the Memogapher feature. Users can take pictures or record quick videos of relevant information, which can easily be shared online. Users can also make use of Voice Memo to record voice and then let it transcribe into text.

The Gear's Auto Lock takes care of the smartphone's screen at any time if the smartwatch is more than 1.5 metres away from it.

Cost-Effective Laptop for Small Businessmen

Lenovo's ThinkPad Edge E431 laptop boasts Lenovo's OneLink technology

Lenovo India has announced the launch of ThinkPad Edge E431 laptop complemented with Lenovo's OneLink technology. This offers a unique dock and power connector that can transmit audio and video with a single connection. The new laptop is powered by the third-generation Intel core processor, Windows 8 operating system and optional NVIDIA GeForce discrete graphics.

Built for small businessmen, the ThinkPad Edge E431 can be equipped with 16GB memory (maximum) and comes with a

built-in dual array microphone, which enhances VOIP with advanced noise cancellation. The machine is amplified with a large, intelligent 5-button TouchPad optimised for Windows 8. It is only 25mm thick, which makes it one of the thinnest business notebooks available in the market.

Ashok Nair, director of SMB, Lenovo India, said, "We are aggressively focusing to build our product portfolio to meet business needs. Lenovo ThinkPad Edge E431 is a cost-effective promise to the small enterprise market in India."
