

Microcontroller-Based Projects

Microcontrollers have always been a topic of interest for engineers. This month we have listed a few websites here that can be helpful if you are interested in microcontroller-based projects

Electronicsforu.com

Electronicsforu.com serves as a storehouse of information for the electronics and technology industry. It brings you the latest news, information about new products and a Web search covering not less than 50,000 electronics websites. Not to forget the hugely popular EFY tested circuits, reproduced from Electronics For You magazine! There is also an MCU projects section.

ElectroFriends.com

This is a one-stop educational site for all electronics and computer engineering students. It has a collection of microcontroller and basic electronics projects. The site includes projects and tutorials for computer engineering students as well. You can also submit your own projects and articles related to electronics and computers. The site has a community page at facebook.com.

EngineersGarage.com

Engineersgarage is a rich resource for engineering students. It has many sections covering 'how-to' articles, invention stories and a forum. There is also a dedicated section on microcontroller projects. This section of EG Labs brings you interesting projects based on 8051 microcontroller. These 8051 projects can serve as a good reference for final-year electronics engineering projects.

Eeweb.com

Co-founders Joe Wolin and Cody Miller formed Aspen Labs, LLC in 2007 with an aim to create a business media company that will focus on the needs of engineers. In 2010, they partnered with Digi-Key Corporation and launched eeweb, a premier electrical engineering community for hardware designers. The site has many useful information along with projects related to MCU.

Best-microcontroller-projects.com

If you are looking for microcontroller projects and resources then this is a useful site for you. Here you can find microcontroller tools projects and tutorials designed by John Main, a professional electronics design engineer based in the UK. Each project includes source code, description and schematics which you can use as a basis for starting your own projects or just use them standalone.
