

South Korea also had a great year in 2012 and it moved to the third place surpassing Taiwan. The United States held onto its fifth rank with just under 5 per cent share. Vietnam is the newest addition to the Top-10 list of PCB-producing countries, with just under 1 per cent.

Among the PCB categories covered, rigid flex saw the highest growth in 2012. High growth was also seen in the market for high-density interconnect (HDI) microvia boards, and 97 per cent of its production was done in Asia and only 1.4 per cent was made in North America.

India amongst lowest e-waste generating nations

India is one of the few countries generating the lowest quantity of e-waste. According to a report prepared by the United Nations Environment Program (UNEP) titled 'Recycling from e-waste to resources,' India's annual e-waste is less than 0.15 kg for every individual.

This is an encouraging statistics and only a few other countries are in the same league of e-waste from personal computers, Jayanthi Natarajan, Environment minister, revealed in Rajya Sabha recently. Jayanthi further added that the Ministry of Environment and Forests (MoEF) has duly been notified when the new e-waste rules came up in May 2011. The rules had been put to effect since May 1, 2012.

FPD TV market to grow to \$6.39 billion by 2015

Digitisation of broadcast, reduced replacement cycles and increased affordability is driving the growth in the Indian flat panel display (FPD) TV market. FPD TV market in India is estimated to grow to \$6.39 billion by 2015 according to a report by Frost & Sullivan.

Advent of Internet-ready and smart TVs has altered the characteristics and dynamics of the TV market, which is witnessing a paradigm shift from cathode ray tubes (CRT) TVs to liquid crystal diode (LCD) TVs to light emitting diode (LED) TVs to smart/high definition (HD) TVs. The FPD TV market comprises LCD, LED, Plasma, 3D and smart TVs.
