

NEW PRODUCTS

RECENTLY INTRODUCED IN INDIA, FROM NEAR AND FAR

COMPONENTS

16-bit microcontrollers

Renesas Electronics Corporation, a premier provider of advanced semiconductor solutions, has launched the new RL78/F13 and RL78/F14 16-bit microcontrollers (MCUs) that contribute to enhanced development

efficiency, reduced system costs, lower system power consumption and improved functional safety features for automotive control systems.

The new MCU series consists of a total of 91 products, including 60 products in the RL78/F13 group and 31 products in the RL78/F14 group. The RL78/F13 MCUs are designed for use in an extensive range of automotive applications; from body control systems, such as power window and side mirror control to automotive motor control systems, such as electric water pumps and cooling fans.

The RL78/F14 MCUs support the body control system applications, such as BCM (body control module) and HVAC (heating, ventilation and air-conditioning) control that require especially large memory capacities.

4G LTE module series

Swiss company U-Blox, a leading provider of wireless and positioning integrated circuits and modules, has

introduced the TOBY-L1 4G LTE module series, a new line of ultra-compact LTE modules. TOBY-L100 and TOBY-L110 are ideally suited for tablets, mobile routers and set-top boxes as well as high-speed M2M applications.

TOBY-L1 LGA modules measure only 24.8×35.6×2.6 mm, allowing for easy mounting on any application board. The module supports USB 2.0 as well as firmware update over the air (FOTA).

TOBY-L1 series delivers ultra-fast data rates. Its key features include LTE Cat 3, 100Mbps download speed, 50Mbps upload speed, easy migration from the U-Blox UMTS, CDMA and GSM modules, a nested design concept, and an extended temperature range of -40 to +85°C.

The series is optimally suited for industrial (M2M) applications, such as remote access to video cameras, digital signage, tele-health functions, vehicle infotainment systems, and security and surveillance systems.

Bay Trail tablet processors

Intel has launched the Intel Atom Z3000 processor (Bay Trail) for tablet devices. The new processors reportedly bring 2x boost to the CPU performance and a 3x boost to the GPU performance over the earlier Clover Trail processors. They are based on the next-generation 22nm Silvermont architecture.

The company also said that new hybrids and tablets based on the Android operating system would be available later this year. Manufacturers like Acer, ASUS, Lenovo and Toshiba will be unveiling these devices in the fourth quarter of 2013. The cost of tablets being run on the Bay Trail processors is going to be low. They will start from around \$199.

"What we have delivered with our Bay Trail platform is an incredibly powerful SoC that delivers outstanding performance, long battery life, and a great experience for the way people use these devices today. It is an incredible leap forward," Gizbot quoted Hermann Eul, corporate vice president and general manager of Intel's mobile and communications group, as saying.

Both quad-core and dual-core processors will be available in the Bay Trail series. In addition, the Intel HD graphics will still be in use along with support from Direct X 11, OpenCL ES 3.0, HDMI 1.4, DP 1.2, eDP 1.3.

Zero-drift operational amplifier

Linear Technology has introduced LTC2057, a high-voltage, low-noise, zero-drift operational amplifier that offers precision DC performance over a wide supply range of 4.75V to 36V or 4.75V to 60V for the LTC2057HV. Offset voltage and 1/f noise are sup-
