Automatic application program generator

GOEPEL Electronic has introduced an automatic application program generator based on the ChipVORX technology for design validation and test of FPGA integrated high-speed I/O for FPGA embedded instruments.

Users can now evaluate transmission channel quality by utilising bit error rate tests (BERT). This provides a graphical evaluation per dynamic eye diagram to support design validation.

The new generator is another option in the integrated JTAG/boundary scan software platform System Cascon, enabling automatic generation of complete application scripts for FPGA embedded HSIO test instruments.

Computer modules

Toradex has launched Apalis T30 2GB V1.0C and Apalis T30 1GB V1.0A, which are an extension of Apalis computer module product family.

Apalis T30 2GB V1.0C features 2GB of DDR3L RAM and increased 8GB of eMMC Flash, which is four times the Flash capacity of its predecessor Apalis T30 2GB V1.0B, making it more ideal for a wide variety of applications.

Along with higher Flash capacity, V1.0C also offers IEEE 1588 precision time protocol (PTP) supporting real-time Ethernet. The IEEE 1588 PTP allows synchronisation of devices connected to an Ethernet network with a high level of accuracy.

Apalis T30 1GB V1.0A comes with a smaller memory footprint offering 1GB of DDR3L RAM and 4GB of eMMC Flash.

TEST & MEASUREMENT

Compact broadband amplifier

Rohde & Schwarz has launched the R&S BBA150 broadband amplifier with two frequency ranges from 0.8 GHz to 3.0GHz and 2.5GHz to 6.0 GHz. The amplifiers, which have been optimised for high frequencies, deliver high output power, and are still compact and light-weight.

The modularity of the amplifiers makes it possible to configure complete systems flexibly to meet user requirements. The amplifier design yields from 15W to 200W of output power. The broadband amplifiers feature outstanding mismatch tolerance and can handle both short-circuit at the RF end and an open RF output. This reduces both downtime and costs.

Vector network analysers

Anritsu has expanded its VectorStar family of vector network analysers (VNAs) with the introduction of the MS4640B series. These Network analysers feature a number of new cutting-

edge measurement capabilities, including PulseView, which provides pulse profile, point-in-pulse and pulse-to-pulse measurements of S-parameters, and DifferentialView for true mode stimulus S-parameter measurements.

The MS4640B series helps engineers address the challenges associated with testing and characterising components and sub-systems designed for radar and today's high-speed serial applications. VectorStar VNAs are available in frequency ranges from 70kHz to 20, 40, 50 and 70GHz and as broadband systems from 70kHz to 125GHz.

SECURITY SOLUTIONS

IP-based surveillance solution

Matrix Comsec, a leading manufacturer of enterprise security solutions, has introduced an IP-based surveillance solution, SATATYA NVR400, strengthening its portfolio of video surveillance products. This technically advanced SATATYA NVR400 allows scalability from 4 to 16 video channels and recording flexibility from full HD to D1 for crystal-clear images.

It allows sequencing of cameras in different layout formats and facilitates simultaneous live view and playback on a single window to simplify monitoring needs. This NVR, along with recording and monitoring, identifies irregularities and sends prompt notifications with event details in the form of SMS and e-mail to prevent any major losses. To safeguard the data, it allows performing scheduled or manual backup on a network as well as on USB.

The search is made efficient by date, time, recording type, event and alarm-based, leading to hassle-free playback.
