Allegro MicroSystems offers a full line of stepper motor driver and pre-driver ICs. These devices feature easy to use two wire step and direction translator interfaces as well as industry standard parallel or serial control. Microstepping positioning is available with resolutions from full step to 16 microsteps per step. Safety features include thermal shutdown, undervoltage lockout and over current protection.

Two package options are available, a TSSOP (with leads), and a QFN (without leads) which has the smallest PCB footprint. Both packages have an exposed pad for enhanced thermal performance.

Applications

Office Automation	Industrial	Automotive
Printers	Sewing machines	Throttle control
Scanners	Closed circuit television	Transmission
Copiers	CNC milling machines	Headlamp leveling
3D Printing	Ticketing	Vent position control
	Vending	
	Robotics
