

and know about the facilities available to them, a study report on 'Test & Certification Facilities for Defence Related Components and Products in India' was released by ELCINA at the Strategic Electronics Summit held in Bengaluru this August. It provides an overview of environmental testing, summarises the facilities in India, and comments on the gaps that currently exist in this space. It also provides recommendations to the concerned authorities to take steps to bridge these gaps and create the right environment for the Defence industry in India to grow as expected.

MRO: A big opportunity

Maintenance, repair and overhaul (MRO) for aerospace and Defence equipment is a big opportunity for private firms and OEMs. Most major equipment remains in service for two to three decades. Common requirements would be subsystems, systems, complete equipment overhaul and upgrades. MRO facilities can be established in the private sector or with OEM participation. MRO

How to make a mark in strategic electronics

Courtesy: Manjunatha Hebbar, senior VP and head, Strategic Solutions, Infotech Enterprises Limited

- Focus on high-volume manufacturing, for business sustainability
- Build ecosystem partnerships with a focus on subsystem/system realisation
- Invest in technology and R&D. Select one or two key technology areas to specialise in. Follow the 'inch wide, mile deep' motto!
- Build a low-cost proposition. Build capability related to your specialisation and optimise for performance
- Acquire technology leadership. Focus on technology leadership in the chosen segment— market leadership will follow.

The time to make a mark in high-growth product/technology segments in strategic electronics is now!

is mainly required in three areas:

1. Army—Tanks, ICVs, guns, radsars and helicopters
2. Navy—Ships, submarines, helicopters, radars
3. Air Force—Aircraft, radars

Apart from these, the other area would be civil aviation. For example, domestic airlines require MRO facilities within the country.

The DRDO is India's premier defence research establishment, which

decides what technologies have to be inducted into the Indian Defence sector. As part of the offset obligations, the DRDO has mentioned certain critical technologies that are required through offset partners. They are clubbed under different headings in a box here.

Indian offset partners—a good opportunity

The Indian offset partner (IOP) is an Indian company chosen by the foreign

TECHNOLOGICAL FRONTIER

MILITARY AND TACTICAL APPLICATION USAGE

- ⌚ Power Over Ethernet (PoE)
- ⌚ IEEE1588 V.2 (PTP) Clock
- ⌚ Traffic Load-Balancing
- ⌚ Link Recovery (5 Min.)
- ⌚ Management Capabilities
- ⌚ Size & Weight Reduction

- ⌚ On-Board Tactical CPU
- ⌚ Security Network Isolation
- ⌚ Deterministic Protocols
- ⌚ Video and Image Over IP
- ⌚ Prioritizing For Tactical Apps.
- ⌚ Tactical Computing

- ⌚ Border Security & Conflict Zone
- ⌚ Naval Systems
- ⌚ Missile Programs
- ⌚ Battle Management Systems (BMS)
- ⌚ Tactical Communications
- ⌚ Digital Army and HQ C4I Systems

- ⌚ Unmanned Platform (UAV, UAS)
- ⌚ Digital Soldier Programs
- ⌚ Intelligence and Surveillance
- ⌚ Electro-Optical Systems
- ⌚ Military Air-Crafts and Helicopters
