

ers to apply them in future battery-less products.

The kit is a complete solution for the developers for harvesting of the energy, energy management and storage. The transfer of this solution to the development of a battery-less product is made easy by providing the selection of the right components, schematics and software examples.

3D X-ray inspection system

Kyoritsu Electric has launched new 3D X-ray inspection system (AXI) – NXI-3300. The NXI series is the company's core product brand respectively for AXIs. The AXI equipment have good reputation for their inspection

reliability and excellent usability, especially among the in-vehicle PCBs manufacturers and high-density SMT industries requiring ultra-high product reliability.

NXI-3300, a brand new automated inline 3D X-ray inspection system, is capable of inspecting soldering of leaded components, chip components as well as BGAs and CSPs.

Four models including the NXI-3300 and NLX-5000 are available as Nagoya's NXI series; the other two models are the NXI-2DYIMH – an inline 2D AXI, and the NXI-2DY – a standalone 2D AXI, both capable of automatically inspecting minimum 25µm diameter voids in solder bumps of BGAs and CSPs.

Wireless camera kit

Mangal Computers & Components has launched a wireless camera kit as a direct replacement to wired type CCTV camera kit. It supports four cameras at the same time.

It comes with 4-channel receiver that can be operated in auto and manual modes. The camera is waterproof and works in both wire and wireless modes. One can use remote control to switch the channels.

Its transmission distance is 100 metres. Features like night vision and audio monitoring with microphone are incorporated in the camera. It also works on 2400MHz frequency.

M2MLogger

In July, Techno Instrumentation launched the LADDERLOGIX series of M2MLoggers. It comprises advanced data-logging devices that collect, store and transmit metered data to device cloud. Built-in Ethernet and optional GPRS connectivity enables high-speed, real-time

streaming of metered data to the cloud. The device can be remotely managed over the cloud to avoid frequent field visits.

I/O modules extend the capabilities of data-logging devices. Optional modules can be connected to perform additional inputs/outputs that are not directly supported by the device. These versatile devices are completely topology agnostic, so that monitoring needs under any conditions can be easily fulfilled.

SOFTWARE

Add-on apps for ECAD and MCAD integration

Altium Limited, a global leader in smart system design automation and provider of advanced 3D PCB design solutions and embedded software development, has partnered with Desktop EDA to provide designers with advanced ECAD

and MCAD integration. The new add-on application, Desktop EDA Solidworks modeler and IDF modelers, are currently available for Altium Designer.

The extension apps for Altium Designer and their companion plug-ins form a bridge between the ECAD and MCAD design worlds. Productivity is greatly increased through the full synchronisation capabilities between the target applications.

Tools for 32-bit embedded RISC microcontroller cores

Uchi Embedded Solutions has launched RKit ARM toolset for industry standard 32-bit embedded RISC microcontroller cores, including Cortex-M3, ARM966E and ARM7TDMI. The complete hardware and software solutions facilitate mastery of these advanced cores and provide everything users need to write, compile and debug their applications.

Software tools include the free GNU C compiler for ARM and the Raisinence integrated development environment 'RIDE7', which provides start-to-finish control of application development including code editing, compilation, optimisation and debugging. As of now Ride7 fully supports ARM MCUs from NXP and ST and TI Stellaris.
