

Monolithic MEMS oscillators are better by design.

CMEMS

Introducing Si50x MEMS Oscillators

Revolutionary, monolithic, single-chip silicon-MEMS oscillators

What if you never had to compensate for your oscillator again?

These new, highly-reliable Si50x MEMS oscillators leverage Silicon Labs' patented CMEMS® technology to enable stable temperature and aging performance guaranteed over 10 years of operation. With short lead times based on a reliable supply chain, standard assembly and CMOS megafab processes and quality, these new MEMS-based silicon oscillators are easy to configure, drop-in compatible and production-ready today:

- Supports any frequency between 32 kHz and 100 MHz
- ± 20 ppm, ± 30 ppm and ± 50 ppm frequency stability options across operating temperatures for extended commercial applications (-20°C to 70°C) and industrial applications (-40°C to 85°C); available in industry-standard 4-pin DFN packages

MEMS manufactured directly on top of CMOS wafer

Get customized samples quickly!

Instantaneous field-programmed samples configured directly at your site. Or configure devices online for rapid, factory-programmed delivery within 2 weeks.

Need your oscillator to work flawlessly? No problem.

Watch videos, download white papers and data sheets, get samples, kits and more—and discover another reason why designers worldwide use Silicon Labs for all their timing needs.
