

Evaluate Hercules™ Safety MCUs to help launch your design for less than \$20

www.ti.com

At \$19.99, the Hercules LaunchPad is the lowest cost evaluation platform for Hercules MCUs and provides an entry-level option enabling developers to gain familiarity with TI Hercules MCUs and evaluate the platform's performance and safety features.

The Hercules LaunchPad is a modular, quick-launch evaluation kit that contains the development board, USB cable and documentation to get you started in safety applications in the automotive, industrial and medical markets.

Features and benefits of the Hercules LaunchPad:

- Two Hercules LaunchPads: RM4x LaunchPad for Industrial & Medical designs and the TM570 LaunchPad for Automotive & Transportation Designs.
- Evaluate Hercules MCUs designed for safety-critical applications related to functional safety standards, such as IEC 61508 and ISO 26262.
- 40-pin BoosterPack XL header that brings out MCU pins for design flexibility.
- Footprint for an additional header to complete access to all MCU pins.
- On-board XDS100v2 JTAG emulator, LED lights, a light sensor and SCI to PC serial communication port.
- Includes software for evaluation.
