Power-factor correction ICs

Power Integrations has announced its HiperPFSTM-3 family of power factor correction ICs, which offer high power factor and high efficiency across the entire load range. Targeting applications with continuous

power demands up to 405W for universal input and 900W for high-line, the ICs feature efficiency levels of better than 95 per cent from ten per cent load to full load and consume less than 60mW under no-load conditions.

Chip capacitors

SMEC Electronics has launched tantalum chip capacitors for use in automotive, military, portable consumer, medical, PCB and other applications.

Some features are:

1. Surge tested for maximum robustness
2. Precision moulded case with flat surfaces for vacuum pick up
3. Laser marking and bold visible-readability polarity stripe compliant terminations
4. Glue pad on underside for bonding to circuit board prior to soldering
5. Encapsulant material satisfies UL94 VO flammability classification
6. MSL (moisture sensitivity level) per IPC/Jdec J-STD-020B is level 1

TEST & MEASUREMENT

Spectrum analyser

This new product combines the function of three separate test equipment, namely, oscilloscope, spectrum analyser, power meter or logic ana-

lyser, into one, enabling frequency, power and timing measurements in one setup. It is an extremely powerful tool for protocol verification and troubleshooting wireless devices.

Clamp meter

EX840 CAT IV clamp meter comes with the following features:

1. Built-in non-contact IR thermometer with laser pointer
2. True RMS current and voltage measurements
3. Peak hold captures inrush currents and transients
4. Multimeter functions include AC/DC voltage, resistance, capacitance, frequency, diode and continuity

5. 43mm (1.7-inch) jaw opening for conductors up to 750MCM or two 500MCM

6. 4000-count backlit display

Radio communication analyzer

MT8821C is a successor to MT8820C and enables up to four carriers with MIMO to be generated in a one-box solution, while retaining code and radio frequency compatibility with MT8820C. This backwards compatibility enables the joint test solution to immediately support all commonly used communication standards such as LTE FDD and TDD including LTE-Advanced, W-CDMA (HSPA, HSPA+), CDMA (EV-DO), TD-SCDMA and GSM (GPRS/EDGE).

Temperature sensor

The PTS series of platinum SMD flat-chip temperature sensors are designed to provide accurate and stable temperature sensing for automotive, space and industrial electronics. The

devices combine enhanced thermal cycling performance with higher operating temperatures up to +175°C.

The sensors offer resistance values of 100Ω and 500Ω in the 0805 size and 100Ω, 500Ω and 1kΩ in the 1206 size; F0.3 and F0.6 tolerance classes; and a near-linear temperature characteristic of +3850ppm/°C.

Digital oscilloscope

Key features of this product are:

Time analysis. High sensitivity of 1mV/div to detect signals that would otherwise be lost in the noise

Frequency analysis. Reliable fault detection with integrated FFT and spectrum analysis with spectrogram

Logic analysis. 20Msample with 5Gsample/s for detailed analysis of digital signals

Protocol analysis. Simple triggering and decoding of serial buses

Digital voltmeter/frequency counter. Key signal parameters at a glance

Digital blood pressure monitor

The device is an easy-to-use monitor with fuzzy logic inflation and controlled deflation. It features a large LCD display with easy-to-read in-progress results and measures systolic and diastolic blood pressure and pulse rates simultaneously, and detects and alerts the user to irregular heartbeat.
