

designed for extreme environmental and demanding electrical conditions of military applications. These accept

a wide range of input voltage and frequency values while delivering a well-conditioned AC output to the load.

Switch-mode power supplies

The (M)WLP350 series is an evolution of the EOS brand of high-technology power solutions, which is designed to operate with single-phase (3-wire) universal input with 0.95 or better power factor at a rated continuous output power of up to 350W. The products have convection cooled ratings of up to 200W, typical efficiency levels of 93 per cent and no-load power consumption levels of 0.5W maximum at 230V AC input levels.

Electric rickshaw battery

INPHYNYT E-Tour electric rickshaw batteries are made of highly-pure-lead-antimonial alloy with thick grid design that reinforces the strength of a grid structure and reduces corrosion at the same time. Highly-fortified grid structure, use of special binders

in pasting, improvised use of world-class separators, copper rings in assembly and dual poles reduces the downtime.

LEDs

LED lights

ENRG has launched two new ambient mood lights, ENRG Prism and ENRG Jugnu. The unique feature

of these lights is that these exhibit an added advantage of turning the colour from white to 256 different shades of RGB LED light using smart technology.

Jugnu is a 5W table-top mood light that comes in the shape of a UFO. It is powered by two AAA batteries and emits soft light to enhance the mood.

CoB LEDs

LUXEON chip on board (CoB) Core Range of LEDs (generation 2) delivers an average of ten per cent higher efficacy and ten per cent higher flux

with a lower voltage and the same footprint as the first-generation LEDs. The LEDs are offered in multiple lumen packages from less than 1000 lumens for MR16 and PAR lamps, up to 7600 lumens for 100W replacements.

RCOB LED drivers

The new RCOB LED driver series from RECOM have specifically been developed to meet the requirements of CoB LEDs. The driver series includes 11 models with output voltages between 25V DC and 44V DC and constant output currents of 350mA to 1050mA, thus offering a suitable driver for virtually any application.

MISCELLANEOUS

PLC modem SoC

ZENO/MAX79356 ultra-low-power powerline communications (PLC) modem system on a chip (SoC) reduces footprint by up to three times and improves time-to-market.

Some key advantages are:

Versatile. Software configurability supports today's PLC standards and will adjust for future standards

Low power. Uses 80 per cent less power when listening for PLC communications (55mW versus 300mW); active transmission power consumption is 70mW

PLC trainers

ABVOLT has announced the expansion of its range of PLC trainers for training applications using different

makes of industrial PLC's as required with different digital/analogue input/output configurations.

3D printer

Dreamer 3D printer is bundled with easy-to-use printing software. It is suitable for people with little to no 3D printing experience. Dreamer has a built-in temperature control system to meet temperature control needs of different materials. It can print complex supporting structures and has a printing accuracy of 0.1mm and build size of 230x150x140mm. It weighs only 11kg and has a stable structure.
