

Eight Things You Did Not Know You Could Do with an iPhone Camera

iPhone 6 and iPhone 6 Plus models

WWW.EFYTIMES.COM

Apple fans love iPhone and its camera, which has come to become the first choice for professional photographers, too. You can take tons of photos with your iPhone, any time. The best part is, unlike a professional camera, the iPhone is incredibly handy. In this

article, we have listed eight things you may not know you could do with iPhone's camera.

All the features mentioned below are available on iPhone 6 and its Plus variant. But most of these are also available on its previous models starting with iPhone 4, as checked at EFY.

Grid. Grid helps you align your photos in perfect order. You can turn

on grid by going to Settings → Photos → Camera → Grid.

Earbuds. Did you know that you can take pictures using your Apple's earphones? The volume button on the earbuds' cord can be used to click the photo and even record video. It acts like a camera-shutter button.

Volume button. Users often complain about the physical camera button on the phone. iPhone's volume button acts as a shutter button. You can press volume Up/Down button to take a photo.

Focus and brightness. iPhone offers the tap-to-focus option. You can simply tap on the screen to focus and slide your finger up and down on the slider to adjust the brightness of a shot. This editing tool makes this camera work like almost a professional point-and-shoot camera.

Lock exposure. You can pre-define exposure very easily in iPhone. All you need to do is simply press and hold on the screen to lock exposure settings. Once you lock these settings, you need not adjust it again.

Burst mode. Taking burst pictures is made easier with iPhone. Press and hold Shutter button to enable Burst Mode. Burst Mode on iPhone can take ten photos per second.

Auto HDR. Auto HDR is an interesting feature on the iPhone. HDR mode takes three photos at different exposures and combines the best aspects of each. You can turn on this feature by launching the camera and tapping HDR.

Timer. You can set the self timer to camera shutter by tapping on Clock icon while taking pictures. This feature comes in very handy while clicking family photos. ●
