

ARTIM'S SWITCH FOR SMART ELITE HOMES

Artim's Smart Switch Board

We are in the age of Automation. Ever since the Industrial revolution, changes in technologies been the order of the day and have occurred quite periodically. Pioneering the modern technologies has been the innovation in the electronic chips and solutions increasing comfort and convenience. In that direction, there is an emerging scenario, which is the Internet of Technologies, and its direct application seems to be the Home automation. Artim Electronics has done considerable work on this area. Here we are trying to directly replace the electrical mechanical switches. Unique is this switch which only needs a small touch using any metal object or human fingers. Moreover, it comes with a WiFi to operate the touch area making life easier for the user while maintaining access through mobile applications.

How is that possible? Artim will provide the GUI, customizable over which you can design and white label your identities (names, floor, and much more) and enable the access through WiFi. Not just this, Artim switch also comes with customizable switch panel that includes an option to commit

or omit switches slots based on client needs. Are you excited? Then let's get quickly into the features as well,

Product features in Brief:

- It is a standalone switch
- The switch is designed with
 - Eight capacitance touch for light ON/OFF
 - Master touch switch to control total panel ON/OFF
 - One socket switch for charge holder
 - Slider for FAN control
- Switch has touch buttons equipped with LED back light that allows user to status (On/Off) on a single Bi-colour LED.
- There is RS 485 port to communicate data and could relay the same over a distance of 1200 M; which is much more than conventional RS232.
- Artim switch uses standard relay (Q3F-1Z) for
- Conserve energy
- Prolong the life of device
- EEPROM (512Kb) is used to store the last status of switch panel and to recollect the status on power off condition.
