

Charging smartly

XS Powercard combines multiple features that make charging easier and hassle-free for users.

Single-port smartcharging. The single-port charging allows users to simultaneously connect XS Powercard to the phone and USB port of a computer, laptop or adaptor. The team made it smart by introducing priority charging, which means that, when the gadget is connected to both phone and USB port, power is first directed to the phone, allowing it to charge. Once the phone is fully-charged, the gadget redirects power to charge itself. So you do not have to separately charge the two. This is ideal for those who charge their phones every night, as they can wake up to find both the devices charged.

Following is how it was implemented:

Current drawn by the phone was measured and calibrated to understand when it is completely-charged. Then, this system was hardwired into the device. The same could have been achieved with software as well but the team decided to take the hardware route as it was cheaper.

Variable charging rates. The device has a mechanical toggle switch that lets you select between two modes of charging. In standard mode, the phone is charged efficiently with 0.55A current. In other words, all of Powercard's power is utilised to charge the phone.

In fast-charging mode, the phone is charged faster but less efficiently with 1A current. Battery of the phone lasts for two hours when charged in

Different Battery Banks Available in the Market

Features	XS Powercard	LithiumCard	mophie powerstation reserve	JUMP Cable
Battery (mAh)	2200	1200	700	800
Size (mm)	82.5x63x6.3	85.6x54x5.5	77x37.9x13	5x5x1.3
Fits in wallet	Yes	Yes	No	No
Data storage	Yes	No	No	No
Variable charging speed	Yes	No	No	No
Priority charging	Yes	No	Not specified	Yes
Price (US\$)	34-45	35-100	39.95	30-40

fast mode and for three hours when charged in standard mode. These numbers may vary with capacity of the battery, number of apps installed on the phone and usage of the phone. The variable charging rate was obtained by altering the feedback loop of the integrated circuit (IC) used in the circuitry.

Power management and device protection. How many times have you plugged in your phone to a power bank but forgotten to turn it on? With smart power management, you do not need to remember to turn on and off the card each time, as it automatically detects the phone and starts or stops charging.

It also has inbuilt circuitry to protect the phone as well as its own battery from over-charge. This is achieved with charge-termination functionality of the IC used on the board, allowing the turning off of charge once the device is completely-charged.

Connectors and flash drive

There are two models of XS Powercard depending on the type of phone connector offered: lightning (for iOS devices) and micro-USB (for most

Android, Blackberry and Window based devices).

Then, there is a USB connector that allows you to connect the power card to the power source. This connector is reinforced with low-profile metal tips, making it ideal for robust, daily usage. The rate at which XS Powercard charges itself depends on the type of power source it is connected to—whether USB 2.0 or USB 3.0 (of a laptop or computer) or AC wall socket (using a standard USB adaptor).

You could also choose between 8GB, 16GB and 32GB of removable storage. This flash drive can be detached from the card and plugged into any standard USB port, enabling easy data storage and transfer.

Similar products in market

Developers claim that this is the only product in the Indian market that clubs a power bank, cables, data-storage device, and data transfer and sync options on a single device that fits inside the credit-card slot of a wallet. Compared to other portable chargers like LithiumCard, mophie powerstation reserve and JUMP Cable, XS Powercard has more battery capacity (2200mAh), multiple charging rates (fast and standard) and even a data-storage device.

Moreover, all the important features of XS Powercard such as smart power management, single-port smart charging and priority charging, three coloured LEDs and three modes of working are not available in any other device in the market. ●

Fun fact

Team Xyra comprises young and ambitious friends and recent college graduates, Armaan Gandhi, Arzan Irani and Sahej Sethi. During the first year of the company's establishment, the three partners were never in the same country for more than a week. This was all achieved while being thousands of kilometres apart. "Where there is a will, there is a way," they say.

Some information

Device : XS Powercard
Brand : Xyra
Models : Connector: Micro-USB/lightning
 Data storage: 8GB/16GB/32GB
 Colour: Black and white
Pricing : ₹ 2999 for the base model
