

Barcode for EFY Article

I am an engineer by profession and keep myself updated on new technologies, circuits, components and much more by reading EFY magazines. However, when I need some actual information, I cannot remember the issue. I am sure many readers are facing this problem. I would like to suggest a possible solution for this problem.

A 2D barcode could be provided for each article and a barcode scanner could be added to EFY app. Then, readers could simply scan the barcode of the article they want to save using the app and add it to a folder on their phone.

Abhimanyu G.

Through email

EFY: Thanks for the feedback and suggestion! We will discuss this with our technical and management teams for feasibility and implementation.

Things You Wanted to Know

Please provide the source codes of 'Remote Control for Controlling the Direction of a DC Motor' project given under Things You Wanted to Know section of June issue.

M. Hyder Hossain, proprietor,
Sonolite Display, Kolkata

Errata

In 'Solar Emergency Lamp' published in June issue, please note the following corrections:

1. In parts list, C3 should be read as 470nF, ceramic disk.
2. The sentence '15V AC connected across connector CON2' under Circuit and Working should be read as '12V AC connected across connector CON2.'
3. On page 81, in the second column, the sentence 'IC CA4130 is high' should be read as 'IC CA3140 is high.'
4. In the PCB layout, Fig.4, IRF2 should be read as IRF840, instead of IRF530.

From Facebook: EFY's Electronics Design Community

Please include projects for third-year diploma students.

Suraj Shitre

EFY: We have many projects available for students on electronicsforu.com under Circuits. Complete kits (including components, PCBs, circuit diagrams and descriptions) of some projects are available with our associates Kits'n'Spares. Please visit their website kitsnspares.com for details.

□ Hi, I am from Vietnam. I have *Electronics Projects* Volume books (Vol. 21 and Vol. 22) for the years 2000 and 2001, respectively. May I know if you have the latest series, particularly from 2002 onwards?

Duy Anh

EFY: Yes, we have *Electronics Projects* Vol. 23 through Vol. 26 available in digital format. You could get these from online stores such as pothi.com, rockstand.in, getscop.com, amazon.com and others.

'Spot An Error' Award Winners

In Table II of 'GPS Master-Slave Clocks with RF Link' DIY circuit published in June issue, for character p, dp value is printed as 0, which is wrong. It should be 1.

Gopiraja

□ In circuit given on page 8, under Q&A of June issue, connections for switches S1 and S2 connecting to the ground line are wrong. Enable pin 9 should not be used if output pins 11 and 14 of L293D are not used.

Vijay Kakul

□ In 'Radio Frequency Detector' circuit in June issue, in the first paragraph, it is wrongly mentioned as UV meter instead of VU meter. A UV (ultraviolet) meter is used to measure UV light levels. Here, we have to use volume unit (VU) meter to measure the RF signal level.

Arunjio Malekall

EFY: The complete source codes including the hex codes for both transmitter and receiver units have been included in the DVD of this month's EFY issue.

RF Detector

In 'Radio Frequency Detector' circuit published in June issue, how can I use it to detect a radio frequency (RF) signal? I do not have an RF meter.

Ruban Ponniah

Through email

The author D. Mohan Kumar replies: The circuit uses a VU meter (such as the one used in old tape recorders) to measure the intensity of RF in a room. A sensitive milliampere meter

can also be used. Brightness of the LED also gives an indication of the presence of an RF signal.

Electromagnetic Relay

This is regarding my circuit 'AC 230V Electromagnetic Relay' published in June issue. I found that the overall circuit efficacy could be improved by interchanging zener diode ZD1 (12V, 1W) and rectifier diode D2 (1N4007).
