

Boost your Development with the Ultimate GUI Tools for Microcontrollers

Flowcode 6 is one of the World's most advanced graphical programming languages for microcontrollers. The great advantage of Flowcode is that it allows those with little experience to create complex electronic systems in minutes. Flowcode currently supports the PICmicro, dSPIC, Arduino, Raspberry pi, AVR and ARM series of microcontrollers.

The Advanced new version 6 also includes 3D modelling for creation of 3D systems like Robotic arm Linear Actuator & Power Supply etc.

e BLOCKS®
LEARN • DESIGN • BUILD

30 DAYS
TRIAL VERSION
AVAILABLE IN DVD

E-Blocks are small circuit boards each of which contains a block of electronics that you would typically find in an electronic or embedded system. There are More than 100 separate circuit boards in the range; from simple LED boards to more complex boards like device programmers, Bluetooth and TCP/IP. E-blocks can be snapped together to form a wide variety of systems that can be used for teaching/learning electronics and for the rapid prototyping of complex electronic systems.

Instrumentation included

Ghost technology provides:

- In-circuit debug
- In-circuit test
- Multi channel oscilloscope
- Multi channel logic analyser
- Multi channel packet decoder
- Data console display

- ▶ Mobile Communication Training Solution
- ▶ CAN BUS Training Solution
- ▶ Zigbee Training Solution
- ▶ USB Training Solution
- ▶ Embedded Internet Training Solution
- ▶ RFID Training Solution
- ▶ Bluetooth Training Solution
