

USEFUL WEBSITES

GETTING STARTED WITH DRONES

Unmanned aerial vehicles (UAVs) or drones are something that fascinates most of us. This month we have some websites that will help you know more about these drones

Compiled by **NIRAJ SAHAY**

diydrones.com

DIY Drones is a community based on Ning social networking platform, and anybody who registers (it is free and easy) can post their own blog entries. It is explicitly built as a social network for drone lovers. There are different groups that discuss drones on this website. It also offers facilities to create a meet-up page for local drone fans.

www.diydrones.com

myfirstdrone.com

MyFirstDrone has been building, buying and flying quadcopters and various other RC drones and model aircraft for the past several years. Tutorials on this website aim to help you in buying all parts, to building and learning how to fly a quadcopter in no time.

www.myfirstdrone.com

droneflyers.com

This site is all about helping beginners with buying and flying quadcopters and other multirotors. In general, it focuses on building, buying and discussing drones. It is run by CHI Associates (Craig Issod), who have decades of experience in building online communities and forums. Starting in April 2013, a number of major upgrades and features were introduced and www.droneflyers.com became a go-to site for consumers desiring information and education on new drones.

robotshop.com

RobotShop is one of the world's leading sources for personal and professional robot technology that help increase pleasure, knowledge, liberty and security of individuals.

They specialise in personal and professional robot technology and offer a wide range of robotic products and services in this sector. The site has a section on learning how to build a drone. So if you are looking to get into drones and UAVs, then the tutorial series available on the website will help you understand the emerging field of UAVs and guide you through the process of building your own UAV using off-the-shelf parts.

dronezon.com

DroneZon is all about the world of drones, multirotors and quadcopters. The site is full of drone videos, UAV news, interviews with drone companies, drone DIY tips and learning materials on drone technology for beginners. It also shows you how drones have been used commercially and in other areas of our lives.
