### Government asks airports to set up solar energy units

The civil aviation ministry has asked Airports Authority of India to make at least four airports energy-neutral by February 2017. As of now, Kochi airport is the only airport in the country that has installed solar panels to generate 12MW of power to meet its energy needs.

### Usha Shriram forays into mobile

The consumer durable brand, Usha, with a pan-India presence has announced its plan to venture into the fast-growing mobile handsets market with an exclusive range of GSM, CDMA feature and smartphones.

### Micromax revenues cross ₹ 100 billion

India's domestic handset maker, Micromax, crossed ₹ 100 billion in annual revenues during 2014-15. The company's sales grew by a whopping 47 per cent in 2014-15 to ₹ 104.5 billion.

### IISc bags US military contract

Bengaluru based Indian Institute of Science (IISc) has bagged a US military contract for research and development on solar powered micro-grids. The contract, worth US\$ 52,900, has been awarded by US Pacific Air Force to develop a solar powered micro-grid with battery and a super-capacitor energy storage system.

### Telit acquires wireless communications assets

Telit, a global enabler of the Internet of

Things, has agreed to acquire Bluetooth, Bluetooth Low Energy and Near Field Communication assets in hardware and software from Stollmann Entwicklungs und VertriebsGmbH in Hamburg, Germany. Stollmann is a global player in the Bluetooth and NFC business, designing, developing and manufacturing cutting-edge, low-power Bluetooth modules and highly-sophisticated software solutions for short-range wireless communications.

### Surya Roshni, Snapdeal to sell LED bulbs

Domestic lighting company Surya Roshni has entered into a strategic alliance with e-commerce company Snapdeal in a bid to increase its market share of LED bulbs business. This tie-up initiates a disruptive trend in energy conservation by making LED bulbs affordable and within the reach of millions of people in tier II and III cities.

### DevCon India 2016 announces winners of GR-Kaede

Winners for the Renesas GR-Kaede design contest, which was done in partnership with EFY, were announced at the event conducted in Bengaluru. The three final designs are for Upasana diagnostic toolkit for Asha workers, smart agriculture system and sign language recognition using sensor gloves. The event focused on embedded technologies being showcased by various firms as well as a two-day conference that focused on embedded technologies for system engineers.

by Department of Biotechnology that are sold across the country. Minister of science and technology, Harsh Vardhan, has said that some of these innovative and affordable products had received US FDA clearances, and about 51 patents had been filed.

The minister added that India will capture ten per cent of the estimated US\$ 600 million global market share of medical technology by 2025.

Some products developed by the department, in association with scientific institutions, industry and public health organisations, include low-cost catheters, scanning devices and band-aids, diagnostic devices, orthopaedic tools among others.

As an outcome, more than 100

innovators have been trained. Several national and international patents have been filed. About 30 prototypes have been developed and nine start-up companies have been established by the fellows and interns of this programme and 13 technologies have been licensed.

### Tech Mahindra bets on digital technologies

Tech Mahindra, the fifth-largest India-listed IT services firm, will be investing and focussing on its 22 platforms, and placing big bets on automation, the Internet of Things and artificial intelligence. It will invest in start-ups, seek external funding for some internal units and partner with technology providers to expand its business.

According to CEO C.P. Gurnani, "Tech Mahindra will go from an IT and engineering services company to become a digital technologies company."

Jagdish Mitra, head of strategy and marketing, has also said that the company is also building technologies in-house, such as platforms that it intends to scale.

Last month, Tech Mahindra held its Mission Innovation Festival in Hyderabad, where it showcased platforms like Prism, a predictive analytics platform, Tactix, an artificial intelligence and machine-learning platform, and Uno, a robotics process automation platform.

### China's LeEco to set up R&D centre in India

LeEco is planning to set up its R&D centre in India with a team of 1000 people. The company, formerly known as LeTV, had entered the Indian market with its launch of smartcycle and is now planning to get Le super-phones. This is in conjunction with smartdevices including 3D helmet, LeMe Bluetooth headphones and other LeEco ecosystem products that include super TVs, electric cars and music services.

EMCs across the country under National Policy on Electronics 2012. The government's Department of Electronics and IT (DeitY) has already given in-principle approvals to 17 greenfield EMCs. It has approved four EMCs that include two in Madhya Pradesh, one each in Rajasthan and Jharkhand.

Under the EMC scheme, the Centre provides an aid capped at 50 per cent of the project cost subject to a ceiling of ₹ 500 million for every 100 acres of land. For larger areas, pro-rata ceiling applies.

### India to capture ten per cent of medical tech market

There are about 40 innovative medical devices and diagnostics launched
