

RELIABLE and ECONOMICAL EMI TESTING SOLUTION

AT166-2 TWO-LINE V-NETWORK

- Frequency range 9 kHz to 30 MHz
- Current up to 16 Amps
- Built-in 10 dB attenuator
- Selectable 150kHz high-pass filter
- Artificial hand
- Compliant to CISPR 16-1-2:2006

AT166-2 Two-Line V-Network is a useful tool in EMI testing. AT166-2 Two-Line V-Network are used to measure distortion signals on the mains cord of an electrical equipment under test (EUT).

It could provide with stable resistance between the testing circuit and reference GND within RF range.

Performances of this product meet with the CISPR16-1-2:2006 standards.

AT2000 Series expander and
AT8900-xx Series near field probes*
