

Devtech LCG 2500

- PLCC based Lighting control gear.
- Controlling operations and data acquisition of electrical parameters from off site location with energy saving up to 50% and reduced maintenance and operating cost.
- Lamp Failure Indication.
- Switching relay for turning lights on/off, provides Alarms and alerts of different functions.

Devtech Surge Guard

- Voltage Surge protection device and is an ideal solution for providing the maximum protection of Outdoor lighting investments and essential for all electrical installations in high risk areas.
- Addressable surge suppressor and this can be used in series as well as parallel configurations.
- Operational LED indications for the system fault indication.

Devtech LCG 6000

- Sub-GHz RF based Lighting control Gear with two way communication between lamp ballasts and segment controller.
- Available in different RF frequency range.
- Provides reliable long range wireless coverage up to several hundred of meters per hop.
- Devtech M2M wireless mesh technology enables robust, self healing and self forming mesh network.

Devtech Group CMS

- GSM/GPRS/3G/4G/Equivalent proven technology installed in a feeder or a switching point for remote monitoring and controlling group of street lights.
- Automatic Street light control system based on precise sunrise and sunset time.
- Energy metering and reporting of failure information to central control station at variable time intervals.
- Instant fault reporting via SMS along with fault information & details of location.
- Self-protection from short-circuit, over voltage, over load, 40KA surge protection and anti-theft alert.

iStreet.network

- Information for managing, monitoring, reporting and controlling of the city assets.
- Enables multiple sensors and information points for the smart city infrastructure.
- iStreet.network can be used with any intelligent hardware nodes.
