

High-Accuracy Power Monitoring for Your Application

Adding high-accuracy power monitoring to your application has become easier with the MCP39F521/511 power monitoring ICs. The combination of a high-performance analog front end and calculation engine provides a range of power quantities including active, reactive and apparent power, active and reactive energy, power factor, frequency and zero-crossing, with accuracies capable of just 0.1% error across a 4000:1 dynamic range.

- High accuracy power monitoring solution
- Provides power calculations and event monitoring
