

The Best-In-Class AC Source to Simulate Versatile Test Conditions

APS-7000 Series 500/1000 VA Programmable AC Power Source

The APS-7000 Series is an AC power source, containing abundant features for the testing and characteristic analysis of power supplies, electronic devices, components and modules. The APS-7000 Series comprises nine measurement functions (Vrms, Irms, F, Ipk, W, VA, PF, Ipk hold, CF) and provides users with interface similar to that of AC Power Meter. The APS-7000 Series, with 4 sets of current range of internal circuit to improve measurement resolution, is ideal for the LED industry and standby mode power consumption test. The abundant features of the APS-7000 Series include five methods to meet the requirements of handling special purpose or abnormal voltage, frequency, and phase; ten sets of the Simulate mode to simulate power outage, voltage rise and voltage fall; ten sets of the Sequence mode to allow users to define parameters and produce sine wave by editing steps; Ramp Control to allow users to set the variation speed for output voltage rise and fall, and Surge/Dip Control to simulate DUT's input power producing a Surge or Dip voltage overlapping with output voltage waveform at a specific time.

- 4.3" large LCD Display
- Measurement Function : Voltage, Current, Power, Frequency, Power Factor, Crest Factor, Apparent Power, Ipeak, Ipk hold
- Surge/Dip Control Mode
- Frequency : 45.0 ~ 500.0Hz(Std); 45.0 ~ 999.9Hz(Opt)
- Voltage Range(RMS) : 155V(Std)/310V(Std)/600V(Opt)
- OVP/OCF/OTP Protection
- Simulate Mode, Sequence Mode, Program Mode
- Ramp Control Function
- ARB (Function Waveform) Mode
- Standard Interface : USB/LAN
- Optional Interface : RS-232 & USB CDC/GPIB
- Minimum Measurement Current : 2 ~ 70mA

SEQUENCE MODE

CONTROL PANEL CHARACTERISTICS
